1:08

foreign good afternoon good afternoon good afternoon it is 1 31 PM Eastern Standard

1:15

Time in the afternoon 13 30 for those of you who are into the 24 hour clock on Friday April 7th year

1:23

2023 my name is Mark kulak this is used Tonic Live Houston live broadcasting

1:29

from the Boston area and Today's Show

1:36

has a research Channel research data collection archival collection uh

1:43

archival Channel and Today's Show brought to you by

1:48

someone who was in the data storage industry for 22 years 23 years or so

1:54

Today's show is going to be reviewing some content that we covered

2:00

a few days ago uh actually it was in the Sunday evening show

2:07

um of this uh of this prior week and in that show we covered

2:16

um we put forth the evidence that within the United States of America

2:21

in the year starting in 2000 late 2019 early 2020

2:27

the uh production pipeline for the antiviral

2:33

known as REM deserveer made by Gilead or gs5734 that the production pipeline of

2:39

this product was uh fired up before

2:45

it the trials even began within the United States of America

2:51

um for several people that was fine chilling information

2:57

it is really spooky to think that there really is evidence of

3:03

premeditation with this product um if it had been something that say was

3:10

a had been used for years or centuries like a even Ivermectin or uh and

3:18

a antibiotic a vitamin something right something which had a long history of

3:25

working for a variety of things that would be one thing but no there was

3:31

um a lot of effort put in invested by top levels or very high levels in the

3:37

United States government to fire up the production Pipeline on a product never worked for anything

3:43

not just never tried I mean never worked and I

3:48

mean never worked as in well people didn't get better I mean never worked as in people died

3:55

now just because there were trials which were so bad that people died that

4:00

doesn't mean that there may not be any utility at all to this product from desevere we don't that's not what we're

4:07

saying we're saying is the uh it had no hit track record of success it was only

4:13

speculation and with all of the things which we had known that what could have worked those

4:20

were just ruled out entirely matter of fact there were efforts placed on calling everything which had worked in

4:26

the past conspiracy theory because this was novel novel novel novel okay and you

4:32

can just look at the research papers to see who loved using that word novel uh to uh and they are saying different

4:39

things these days that they may have not have said that regardless I wanted to review this evidence

4:45

um there was a longer show on Sunday and I it was a lot of chat and I knew that it would probably get a

4:52

strike in this totality if I left it on the channel so I made a decision to just to cut the

4:58

whole thing down yesterday's show I'm about 40 to 60 percent done with the

5:03

edits and the cleanup I will have that posted by this afternoon this evening and that was reviewing the reasons why

5:10

remdezavir became the standard of care for people who were diagnosed the covid-19 disease in the United States of

5:16

America again we are a very U.S focused show um so uh

5:23

um I I don't I don't I just can't look at every country I mean the data within my own country is is bent and corrupt

5:29

enough uh there's simply no chance to understand the different types of corruption and information I should say

5:35

narrative bending in every other country in the world so uh why bother I can barely get my get my grip on my own

5:41

country so um this was a a really important part it

5:47

wasn't planned to be a uh like a key part of the Sunday show uh but I wanted

5:53

it available uh for you now if you're looking for a document that

6:00

says uh outright right up front that you know Rick Wright or Barda

6:07

um started to manufacture REM desovir before it was needed I don't know that I mean I haven't seen

6:14

every article out there um but there may not be anything that says it quite that explicitly at least

6:20

not in the headline so we're just going to review the evidence which uh if there's truth to

6:27

it would support the statement that the REM desover manufacturing was jump

6:33

started early was started early that the pipeline was put into movement early

6:39

and in fact we can even show that there is evidence that going all the way back

6:44

to 2017 there was this is a peculiar fascination with more study of RAM

6:50

desevere and maybe adding it to the Strategic United States strategic National stockpile

6:55

the United States strategic National stockpile is where we we United States keep our extra vaccines Therapeutics

7:03

vitamins Band-Aids you know whatever masks is

7:08

related to the uh we keep it in a stockpile somehow distributed throughout the

7:14

United States protected to be ready to go should there ever be a national Regional Emergency that requires

7:22

uh uh large amounts of certain types of medicines or Therapeutics or Etc as a US

7:28

citizen I'm not objected at all to some people the United States government pursuing such a thing should there be an

7:34

unexpected um you know active nature um that would uh that would lead to this

7:41

um event it could be the fire um tsunami volcano

7:47

um really I'm that serious about this stuff it's not a bad investment of uh of stock pair of uh taxpayer money and uh

7:55

and to have some governance with that unfortunately in this case most of those people wouldn't be benefiting at all

8:01

from REM deserveer uh only people who happen to be experiencing a novel virus uh which well well we'll just uh we

8:09

won't even finish that tensions but you know what I'd like to say there so uh this is a live show and I'm hoping

8:16

to just leave this one as is on YouTube on my live channel for at

8:22

least a day or two um I will there's a couple areas where I'm gonna have to Boogie a little bit to

8:29

to not State anything that's too overtly against the censorship

8:36

um but I'd like to leave it up for a little while um and then just put the the same copies on the other channels I'm already at

8:43

least one video behind on editing uh and putting up a cleaned up version on so I

8:49

don't want to have too many videos taken down and then having to repost so give me a second here and I want to

8:59

why is that not locking in oh come on are you serious boy this machine is going slow over here

9:06

just give me a second here I just want to open up the chat and have it open on the side here

9:11

I see 27 people live that's pretty cool that's pretty pretty darn cool I didn't

9:18

see anyone else broadcasting or doing a Twitter space

9:26

um I don't like to stomp on other people's feet not to mention you know what there's a few other channels that I always want to listen to

9:32

too when they're streaming same as you guys all right so

9:37

let us uh let us uh begin this little uh uh Escapade here how we doing rt3 good

9:44

to see you Deborah uh rock girl uh Spike the like I like it

9:50

I like this bike I like the way that phrase sounds uh maple syrup good to see

9:55

you as well you guys are the best you guys are the best you guys are the best okay now so we're gonna read a few different

10:02

articles uh browse through them at a high level we don't believe in uh I

10:08

don't I don't use whistleblower evidence I don't believe using secondhand evidence this person said I overheard

10:14

this whatever I've been in a situation before where I was privy to seeing some things and it

10:19

doesn't really add up to a hill of beans um all it does is it may help another researcher become aware of things that

10:25

they need to look for so all the stuff we have in here is public sources most of them matter of fact even mainstream

10:33

sources it's not like we're quoting Infowars all right very very seldom when you see me no slander to everyone at

10:41

Infowars but very seldom do I will I use something like that as a uh as a source

10:48

so let us go to um the remdezavir page and the article I

10:54

know I want to see I think it was from Business Insider

10:59

and it came out sometime around

11:05

I think it was like summer time and let me see if I can find this puppy

11:11

here I'm pretty sure it was a Business

11:17

Insider uh article here here we go yeah but it's

11:25

Bloomberg got you it was a Bloomberg article so uh this is a Bloomberg article from

11:32

uh May 14 2020 guys okay May 14 2020 I'm just

11:39

going to I'm going to downsize a little bit here I'm already kind of downsized I'm gonna

11:46

downsize a little bit more okay

11:52

uh May 14th 2020 Bloomberg the title of the article

11:57

is all eyes on Gilead last year Thomas killar uh and by the

12:04

way if you just want to have a a visual here this is Thomas Hillar born 1967. uh

12:11

this is who this person is referring to uh he's uh from the old Czech Republic

12:16

area um last last New Year's Eve Thomas killar vice president for Discovery

12:25

virology at Gilead Sciences Incorporated received a disturbing email from atop

12:31

infectious diseases expert at the University of Virginia the researcher had been working with shilar on a plan

12:38

to test the Gilead Drug remdesavir as a treatment for Middle East Respiratory Syndrome a disease a deadly disease

12:45

caused by a Coronavirus MERS had been flaring up from time to time in Saudi Arabia and elsewhere since

12:51

2012 but this email New Year's Eve email was about something more ominous these

12:59

were cases of pneumonia suddenly emerging in Wuhan China watch this one the virologist warned it

13:06

might be a new coronavirus remdesavir was one of the few experimental

13:11

medicines that had shown promise in a lab studies against a wide variety of coronaviruses it did
hmm

13:19

well we've seen those papers their narrators know we've seen those papers such as the ones written by Barrick and

13:26

the promise was if it's used very very very early dare I say prophylactically

13:32

those papers said that if you use it late there is no promise interesting how they keep ignoring that

13:38

in these articles uh narrator's note ended like the rest

13:43

of the world Gilead knew next to nothing about this new one meaning the new pneumonia breaking out in Wuhan the

13:50

World Health Organization hadn't yet confirmed there was sustained human human spread and the extent of the

13:58

outbreak in Wuhan wouldn't become clear for weeks how would they know nobody knew at this point whether it

14:05

would become a pandemic but Gilead started planning on the Assumption it

14:10

could within weeks chief executive officer Daniel O'Day performed the task

14:15

force to study how to test from desevere and if it worked mass produced it

14:22

so this is suggesting that they were starting to think about Mass producing this and reviewing the need to mass

14:28

produce it on New Year's Eve

14:37

can you imagine getting a phone call that someone has the flu one person and a few people have the sniffles on the

14:44

other side of the planet and you shouldn't and and and actually investing like a billion dollars or

14:50

whatever it is to fire up the Productions machines and more studies based upon

14:56

such scant evidence I'll tell you what most Executives that would do something like that for the

15:02

would be fired they wouldn't survive that is a ridiculous assessment but that's the narrative

15:10

even by the exacting standards of pharmaceuticals REM desevere is tricky to produce the months-long process

15:16

involves 70 raw materials reagents and catalysts the resulting active

15:23

pharmaceutical ingredient standing API is a white powder 1.1 grams

15:29

of which constitutes a single 10-day course of treatment

15:35

is administered intravenously which introduces additional complexity into

15:40

the manufacturing the powder must be dissolved into a solution and then placed into a glass

15:47

vial under sterile conditions or placed into glass vials excuse me

15:52

thanks to its work on Ebola Gilead already had a small supply of REM

15:58

deserveer on hand how fortunate sitting in Cold Storage in Switzerland

16:03

California where enough 30 30 milliliter vials of the drug to treat 5 000 people

16:10

which made it possible to begin human trials in the United States China and elsewhere

16:15

so it just happened to be there just happened to be

16:21

the perfect amount of excess hanging out in a freezer somewhere next

16:26

to the ice cream in the Bud Light to run all the trials

16:33

how convenient in a factory in Edmonton Alberta Gilead

16:41

had 100 kilograms of the bulk white powder perhaps enough to treat 90 000 patients isn't that another home run

16:49

coincidence there just happened to be enough powder sitting in a few drums out

16:54

behind the the whatever uh the laser tag place or wherever it is

17:02

they keep the stuff to make another 90 000 just enough for

17:07

the next round of patience in the early trials just

17:13

enough with just enough time between the powder in the in the keg to ship it and

17:20

to get it into the glass bottles just enough isn't that's beautiful Gilead that's

17:27

just so beautiful baby to fill enough from deservoir vials to treat millions in the pandemic however

17:34

such as in the summertime would require a metric ton or more of the bulk drug

17:41

so imagine you have this product you have 70 ingredients it takes like what nine

17:46

to ten months to make if there isn't action taken at this time

17:52

there is no way there would have been REM deserver available for all the hospitals in New

17:59

York City in the summertime of 2020. right it's pretty simple so

18:06

but America the United States didn't even have its first patient until June 15th which

18:11

wasn't even given compassionate use of REM deserve until June 23rd which didn't end until June excuse

18:18

me January started January 23rd and ended January 29th not to mention we

18:25

didn't even have a trial we didn't even have a 50-person trial yet against coronavirus and REM deserve so

18:33

even let's just say there was The Compassion use patent zero right and then there is a trial

18:39

with let's say a few hundred people if those things wound up being successful we wouldn't know that until

18:46

the end of February of 2020 which means if this product takes eight to ten

18:53

months to make it's not going to be available until December 2020 or January of 2021.

19:02

however because it's never really been used effectively in with humans against

19:08

anything and because there's thousands of things which have been used with a variety of

19:13

illnesses we treat symptoms not genetic codes right we treat symptoms and not genetic codes

19:21

when did hospitals make that transition you go to the hospital you have a fever

19:27

when the body has a fever when when it detects it there's a microbe swimming around and it wants to raise the

19:33

temperature and kill it you don't go gee we should do a gene sequencing of the bacteria to see what's going on here you

19:39

go no the body has infection usually right not all the time but

19:45

usually that means that if you can give some antibiotics the person more often

19:51

than not would respond favorably you don't need the G sequence the little bugs inside the body to figure out

19:56

what's going on right right so in this case here

20:02

um there needs to be a rule that well because it's novel so incredibly novel

20:07

obviously nothing else could ever work and if that with the production pipeline

20:13

being as long as it is there's no way that they could have had eight to ten months after the first trial and I don't mean

20:20

like a 10 000 person trial I mean like 100 person trial

20:26

however it would be thinking reasonably thinking logically

20:31

here it would be irresponsible to start firing up a thousand different types of drugs that have never been used

20:38

effectively with any bird person that matter of fact resulted were so bad that they actually wound up killing more

20:44

people than survived why would you start making something like that so early not to mention I'm

20:51

sure that there have been other drugs out there which have worked poorly which one do you choose you just choose one

20:57

you throw a dart at the board do you do all of them well let's continue here

21:03

so to fill enough from desevere to treat millions of in the pandemic however would require a metric ton or more of

21:09

the bulk drug Gilead didn't have close to that and still doesn't so back in January it ordered more than a dozen of

21:16

the most crucial starting materials and reagents from suppliers in China Europe and elsewhere in January in January

21:24

January Gilead also helped his contractors locate sufficient supplies of compounds

21:31

needed to start making those materials Gilead fired up the production timeline in January

21:39

now given the knowing that there's thousands of different things which they could try why this one

21:46

why Gilead has thousands of different compounds why this one why

21:52

that one how many other companies fired up production at that scale

21:59

of their antivirals at that time why so early

22:05

however it still wouldn't have been done so there's a little bit more to this guys there haven't been a lot of stories of

22:12

foresight and preparedness in this pandemic this is one I'm so thankful Bloomberg

22:19

after a big trial sponsored by the National Institute of allergy infectious diseases REM deserveer was authorized on

22:25

May 1st for emergency use on covet 19. the disease caused by the new Coronavirus Dr Anthony vouchi the

22:32

director of the nieid has likened the trial of rim desevere to the first big trial of AZT

22:38

the first drug on HIV anyways if you ever let's just say compare REM deserved

22:44

AZT and if someone says that's conspiracy theory you can just say well Bloomberg actually

22:51

quoted fauci comparing the success of REM deserveer to act that was a

22:59

fauci's words as AZT was rendezvir is being authorized

23:05

for a wide use before it's fully clear how effective it will be

23:11

in other words we need to assume that vitamin C is lethal however we must also assume

23:20

that REM deserveer could help until it shows it doesn't help

23:26

until there's a trial that shows REM deservir is bad and by the way given the fact that REM deservir can be used

23:32

really early on someone exposed to a virus like particle there's always a way to get data that shows that REM deserveer

23:38

isn't bad if you use it the wrong way see see isn't that beautiful isn't that just a sweet little trick a little trick

23:45

that REM deservier has so because of this dual nature of it

23:50

right because of that there will never be a test ever that that at least not by

23:57

these insiders that shows it's bad and it's be and because of that it will remain the standard of care while people

24:03

talk about 5th gen Warfare while people talk about uh Barrack while people talk about

24:09

China while people talk about this and while people talk about that and you see in talking about Trump and talking about

24:14

Biden and talking about a million other things this stuff is going to remain the standard of care

24:21

very same people who were involved in making it so want you distracted and

24:27

they don't want you to talk about REM deserve they're even willing to let you talk about the vents now just don't talk about the rim desevere

24:36

preliminary data from the 1063 person trial show the medicine sped recovery in

24:42

the most serious cases of kova 19 by about four days that is the most bizarre metric ever

24:48

so in the serious cases if you stop counting the people who died

24:54

they might have been released four days versus the people who didn't get it and you also need to look at what else these

25:01

people were injected with because it wasn't 100 controlled it's

25:06

the most corrupt trial that's ever been run and fauci knows it and Rick bright of Barta also knows it

25:14

full details haven't been published the doctors just have to run with it

25:21

huh that's awful uh and a smaller trial in China didn't find a benefit well there you there's a

25:27

beautiful way of saying it the smaller trial in China didn't find a benefit well in fact the smaller trial

25:34

in China was the same number of people it's just that they stopped getting the people stopped showing up sick they

25:41

couldn't fill it but the people who did show up sick guess what they had more deaths than live saved

25:48

using REM deservir I guess one way to say that would be remdezavir seems to be killing people

25:53

but I suppose another way of saying it would be China didn't find a benefit hmm

25:59

sort of like saying I can't find a benefit of hitting my knee with a crowbar

26:07

I can't find a benefit of sticking a hot skewer into my eyeball

26:14

I just can't find one

26:19

the Food and Drug Administration and granting emergency authorization didn't allow Gilead to claim the drug is safe

26:25

and effective for coven 19. the agency said only that it's reasonable to

26:31

believe the medicine may help the FDA never said that as corrupt as they are

26:37

even they wouldn't say it's safe and effective all they kept saying was it could help fauci says well it might help

26:44

everyone said it could help it might help but we can't find that it doesn't not help

26:50

using Twisted trials and ignoring the trials from from China which seem to

26:55

unequivocally show it was bad it's just hilarious

27:02

uh oday says it and this is the this is the logic oday says it's not a cure

27:07

it's a first step but it's an important first step many additional drugs and vaccines will

27:14

probably be needed to stop the pandemic maybe but guess what you won't be able to take them unless uh unless they bless

27:20

it he says Gilead itself is working on an easier to administer uh inhale form of

27:27

Remedy severe that might be useful for Less severe cases wonderful so you get people who are

27:32

totally asymptomatic and probably not sick something that they can inhale to make more evidence that the drug is safe

27:38

and effective I see how this works I see what's going on here

27:43

but and again we are reading in May 2000 and um uh May 14 2020 Bloomberg article titled

27:51

emergency approval of the antiviral drug room decibir is the first good news in the pandemic this is how Gilead

27:57

scientists prepared for the moment now

28:04

um a couple more paragraphs here is what we need but with few other medicines available and the number of covid-19 cases continuing to grow steadily about

28:11

4.3 million cases in 290 000 deaths at press time the drug is likely to be in high demand

28:18

until a better treatment or a vaccine is available

28:23

remember warp speed wasn't until May 15th and

28:28

and bright are on record saying that it was going to be a year and a half to two years

28:34

before the vaccine came out as of this time the plan was two years of REM deserver

28:42

can you believe that these people these scientists were going to reward us

28:50

with two years two years of REM dezavir that was the

28:57

plan before warp speed if you think warp speed was bad never forget the plan was two years of

29:04

REM de severe before the vaccines saved us now the vaccines do you think the

29:11

vaccines were going to work you bet you're behind they were going to find a way to show that they were effective

29:18

curiously though you probably would have still seen people dying in their sleep maybe Keeling over at a basketball game

29:25

hmm I wonder why of course all of those sudden deaths would have been blamed on

29:32

coronavirus you need to know that right because they would have all tested positive for Coronavirus they wouldn't

29:38

have been blamed on a vaccine injury because the vaccine there's no way they would be injecting

29:43

the vaccine into anyone right they were going to wait two years we were just gonna have two years of REM deserver

29:50

there's no chance because these people are so ethical there's no chance that

29:55

they would have injected mRNA or DNA vaccine in the people which maybe would cause them to test

30:01

positive for covid and if they died Mark it down as a coronavirus that's that is

30:06

that is the most absurd thing and I know I know that never would have happened

30:15

Gilead plans to donate the first 1.5 million vials enough for 200 000 patients

30:21

the the number depends upon dosage blah blah blah this will be delivered in the spring wow

30:27

so Gilead fired it up decided to just for the heck of it fire up all of their manufacturing for

30:34

Guilt for REM deserveer and to give it away

30:45

wow ah how do you even respond to that

30:52

and it'll be delivered by Spring by Fall a much larger Supply should start to become available and Gilead is working

30:58

with other unnamed companies to bring factories online overseas the question is can Gilead make enough

31:05

of it for the whole world

31:11

this is just insane so uh of course they talk about 25

31:18

different chemicals all the different tricks um to the manufacturing uh let's see

31:25

here now this is some more stuff I see some good comments on here

31:30

uh the calculations on the need to order more raw

31:36

ingredients and other supplies right away to prevent bottlenecks this is back in okay I have to go back a little bit now

31:43

oh there's a lot of good stuff here depending upon how you count there are about 25 chemical steps in the

31:48

production process most drugs require about half that number some of the steps are more delicate than

31:54

others and early one uses a reagent so flammable it will spontaneously combust

32:01

if exposed to air ah that sounds like something you want inject it into your body

32:06

another involves a poison called try um uh try uh methylcisl cyanide yes it

32:14

is it does say cyanide if you get it on your body you better get yourself to the hospital really

32:19

quick and you might still not survive wow there's a chemical that goes in it

32:25

that's so toxic that if it gets on your if it gets on your body it will kill you however

32:32

during the process of manufacturing room desevere

32:37

okay afterwards you we are supposed to believe that not only should we get an

32:42

honor body but we should inject it into our bloodstreams

32:48

wow holy moly

32:53

um now I've been uh and I'm gonna remain it doesn't really matter by the way

32:58

exactly what REM deservir boils down to if it boils down to cyanide if a boy ends down to cyclon
B if it boils down

33:04

the cranberry juice orange juice battery acid whatever the high level that if you look at the

33:10

data it's correlated with bad outcomes especially if it's used late I ask you please do not focus
on the key

33:19

agents of properties of REM deserveer um and the uh how it compares to other

33:26

chemicals and other poisons please don't do that because you're turning the argument into well
REM deserve is correlated with bad

33:33

outcomes to uh if you can just prove that REM deserveer is in snake venom obviously you I'm
debunked don't fall

33:40

into that Trap please don't fall into that trap now of course it's important how the

33:46

product is made and to study it and so forth of course that's important but the

33:51

the but it's sort of like going to trial uh with a murder charge instead of saying well here's the
video of of Joey

33:58

stab and Jerry you actually get into the details of how Jerry died of organ failure after the

34:04

blade went in it's it why does it matter one guy stabbed another guy that's that's the key idea
right

34:13

okay so Kent estimated that without improvements in the process it would take nine to 12 months to take a batch

34:19

of REM deserver from scratch this is where I get the number of 10 months 9 to 12 months to make a batch of REM deserver

34:26

from scratch so if they didn't start making this stuff until after the trials it wouldn't

34:32

have been around that includes a few months for suppliers

34:37

scattered around the world to make the raw ingredients six months for Gilead to Ensemble the ingredients in the precious

34:43

powders and a final month to finish and package a drug at a at a filling plant in La Verne California

34:50

the calculation LED Kent and uh uh Olea to brief oday on the need to order more

34:58

raw ingredients and other supplies right away to prevent bottlenecks oday signed off immediately KET says at the same

35:04

time Kent assembled a team of 20 chemists who started working on ways to speed up the manufacturing process on

35:12

both from desevere Powder made in Edmonton and the starter chemicals made by Gilead's contractors eventually they

35:17

instituted tweaks that reduced the time to manufacture the drug to six months isn't that amazing

35:22

and somewhere and I mentioned in this article though is that it was actually Rick Wright on

35:28

that team that led that effort to to carve two months off

35:33

so every time there seems to be just just enough distance to make it

35:39

difficult to get REM deserver into the arms and into the bodies that everyone needs it

35:44

after the trials are done there's always a way to shorten the time to explain why there's always enough from desevere in

35:51

the hospital to inject in the people there was never a remedies of your shortage think about that ever

35:57

no hospital ever said sorry gonna have to wait a few weeks for the Rendezvous there was always enough

36:03

as complicated as it was to make and as expensive as it was to make there was and as soon as the

36:11

authorizations came after the trials there was always enough of the product how is that possible

36:18

unless there was a effort a coordinated effort to ensure the

36:24

pipeline was in place so even this stuff here like they don't mention here the details of well there

36:31

just happened to be barrels barrels a powder hanging out somewhere I want

36:37

someone's Locker in the back of someone's forward Pinto there just happened to be you know

50

36:42

million dollars of raw ingredients just hanging out

36:49

if you're working in a company and if you spend Millions tens of millions of dollars on a raw ingredient that winds

36:55

up not being used you get fired you lose your bonus you can't pay for the in-ground pool that you want to put in

37:01

your house you're screwed you can't do that

37:09

this means that the top levels of this company somehow and I don't mean starting in January I

37:16

mean starting in let's be honest here

37:21

August of 2019. at a minimum there were already efforts to acquire

37:28

the tons of ingredients the dozens of ingredients and manufacture the product up to the point where the powder was

37:34

sitting in kegs why would they do that

37:41

why was there such a coordinated effort a premeditated effort to manufacture so

37:48

much REM deservir before it was trialled in anyone for Coronavirus

37:54

why not anything else nothing else REM desevere why

38:02

and there was always enough for everybody and if you know it takes 10 months and

38:09

if you know it takes months just to get the ingredients together there's no explanation for that other than total

38:15

premeditation to have the pipeline going

38:21

we know from looking at the extents of whistleblower complaint between Rick

38:26

bright the director of Barda who by the way is overseeing overseeing

38:31

the contracts of Robert Malone for nearly 10 years okay

38:37

we know that from that whistleblower complaint and maybe it's not uh was

38:42

where's the best page for me to uh to have that information here probably in

38:48

the famotidine trials

38:54

yeah the uh whether or not for Mo team is this is the extensive Rick bright whistleblower complaint filed uh April

39:01

20th uh 2020 against his boss Robert Cadillac Rick breit of Barta was demoted

39:10

effectively for insubordination at the at

39:15

it was really about REM deserve and famotidine really

39:20

the the uh somehow uh Cadillac got 20 million dollars 22

39:26

million dollars to trial for motidine and

39:31

Rick bright one way or another wound up transferring control of this 20 million dollar fomotidine contract to alchem

39:38

chemical where the person who was subcontracting Rick excuse me Robert Malone was overlooking it at which point

39:46

the trial went off the rails and failed now I don't think I'm not sure if Modine was really helpful at all

39:52

some people say maybe at high levels if it's ejected but who the heck knows right

39:59

but there's also a constant theme in this 75-page whistleblower complaint

40:05

about Rick bright also being in disagreement with his boss Robert Cadillac of asper secretary vasper

40:12

about the benefits of Rendezvous going back to the fall of 2019.

40:17

the uh Cadillac wanted to invest in this antiviral

40:22

eidd2801 I think from Emory University which effectively was eventually

40:28

manufactured by Merck as malnip malnuriper can never pronounce it properly who

40:34

really cares at this point and bright wanted REM deserveer always and they got into a lot of tension about

40:41

this a lot of arguing but no sooner than the emails start coming from China uh as as we just read

40:48

from Bloomberg December 31st 2019 um that Rick bright and Gilead were

40:55

already collaborating on getting the production going up going now not only

41:01

did they get the production going at that time remember somebody somehow

41:06

already manufactured barrels of raw ingredients that were just that were

41:12

just sitting around somewhere in the freezer next to the ice cream

41:20

it's in someone's house sitting behind the the printer paper

41:26

who does that the answer is nobody does that

41:31

that was a premeditated move don't tell me it was left over from the Ebola trials from four years ago six years ago

41:38

that's baloney that's a lie I'll call that out is a lie

41:44

and if it was well you just assume it's fresh still something that you know if it gets on your skin will will melt

41:51

through it sort of like the uh the scene from Alien like Reese gets hit and you know his

41:59

chest is on fire and the other guy's arm falls off and you can let that sit in a

42:04

barrel somewhere for a few years it's still gonna be okay seriously are you serious no it was premeditated

42:12

this was a pre-meditated effort involving multiple people no I don't know everyone and I don't

42:19

know who the ringleader is but we sure know that Rick bright of Barta was a key person and other

42:27

Executives at least a couple of them at Gilead must have known there's no way

42:32

that their that their papers that their balance sheets would have been looking favorable with tens of millions of

42:39

dollars of raw ingredient just being made for no apparent reason and hanging around this was all premeditated

42:46

and knowing okay so let's just say they took a bet why didn't other companies fire up and spend tens of million

42:53

dollars on speculative products why were we banned from from using vitamin C vitamin D

42:59

spring water you know people were treated with such

43:07

abuse people were fooled into thinking that

43:13

this virus was so novel and deadly that you couldn't even have your family with

43:18

you to hold your hand

43:24

foreign who else worked with Rick bright on this well I definitely know Cena bavari of

43:31

you Samurai was a very very big player in advocating for REM dezavir for

43:36

everything especially novel coronavirus is probably

43:41

coming from China which caused the pandemic which were zoonotic and left off a bat threw a camel onto a person in

43:48

a wet Market where Rim desevere was most likely to be the thing that would work that's exactly the paper that he wrote

43:54

and that is one of the papers which was used as justification to start the trials

43:59

as well as this computation work done on programs it's defense

44:04

reduction Agency on platforms like domain

44:10

so I'm not going to do too much more that's 45 minutes that's a lot of content I'll look at comments for a few

44:16

minutes here all right just wanted to be clear if you want to know where where this

44:23

narrative is being created from go to my site look at the Timeline that we have for

44:28

REM deserve we mapped out and if I don't know exactly the date something happened like

44:34

if it says that right did Rick Wright did something in January I'll say estimated date EST

44:40

some of these have links to content um some of them I just have a static link or the link may not work

44:48

um I'm working on a million different things at once here but the evidence

44:54

this isn't just speculation this is hard evidence okay and again we don't know it the word

45:01

evidence of itself doesn't mean that a statements in the evidence is true right I mean if I wrote you know on this paper

45:08

that I am the king of England well I could say that this is paper as evidence that I am the king of England

45:14

but it doesn't mean I'm the king of England right so these uh papers this whistleblower

45:21

complaint these articles from Bloomberg these uh oppressed statements that came out of HHS their evidence in all the

45:29

evidence points to pipeline being fired up absurdly early

45:39

nonsensically early so early that it was must have been premeditated

45:45

now if it turned out that REM dezavir was saving every life it was injected into

45:52

that would be one thing I would say let's start hinting up bonuses and awards

45:57

but it hasn't it hasn't been represented properly and and the fact that it's been used late

46:03

has resulted in a lot of deaths and if it not for those deaths there Never Would Have Been Enough Panic to justify

46:08

any vaccines every vaccine injury every vaccine death

46:14

in the United States at least is only possible because of the authorization of the

46:21

drugs in the first place it doesn't matter if DOD made them doesn't matter if my mom made him in the kitchen it

46:27

doesn't matter who made them it doesn't matter if they were made right or wrong every single vaccine injection happened

46:34

because of the panic that resulted that was created by the number of people dying in that summer for a variety of

46:42

causes including isolation including suicide

46:47

including authorizing crap like this

46:52

if you want to talk about lot numbers and vaccines fine however

46:57

there would have been not one vaccine injury if not for this

47:03

you know I'm trying to say you know what I'm saying namin all right guys

47:11

um oh thank you thank you is it my research you know what I'm just collecting data

47:18

I I work very hard at it and it takes a lot of time all right is it my research it's your data it's

47:26

our data it's everyone's data it's out there it's not mine it was a lot of work

47:32

to put together and you know what there's a lot of things in my life I wish I've done

47:37

other sacrifices I made that I haven't so this is one that I'm doing doesn't make me a hero I know that many of you

47:44

have done things which are far more heroic than anything that I've ever done so this is our data this is everyone's data

47:52

and this is what it says there's no spin on this at all it is is

47:58

what it is there is no other explanation for any of this

48:06

not mean yeah do you know dystopian you know what

48:12

no this is the story do you know what that's from I'm actually quoting a uh um who's the guy uh I can't think of his

48:19

name right now he he filled in for uh The Daily Show uh as a stand-up comic I thought he was

48:26

really brilliant he's from a South African guy um and like the Brilliance of do you

48:32

know what I mean being reduced to Namine is one of the most beautiful tricks in

48:38

the English evolutions of the English language of the last 20 years

48:44

hey happy Easter to you and Happy Easter to everyone else in the chat as well

48:49

um please everyone have a blessed weekend please uh um spend some time uh with the family

48:54

take a break spend some time in the house if you're a guy if you're antisocial work on the

49:00

house because you know what your house takes care of your family right um uh that's an indirect way of doing if

49:07

that's what you need to do uh let's see here the great meme of old book volumes

49:13

uh uh let's just say effery Advanced referee and super Advanced effrey that's

49:20

brilliant wild tangent uh shelf stable is a thing it could be shelf stable

49:28

um I mean look I mean how many of how many of us have like an old bottle of cilantro right or like seasoning uh you

49:35

know crushed you know onion powder and trust me you know you've moved you've

49:40

done like two moves it probably goes all the way back to college and you're like

49:45

well the bottle says 10 years 14 years ago I can still use it but that's onion

49:51

powder this is this is stuff made with cyanide products that's being injected at the people it's a different standard

49:58

than the old spices in the spice drawer

50:03

um it could be shelf stable however that's an assumption if the product's never even been used

50:09

successfully I mean knowing if it's shelf stable is like the next is like another level of

50:15

knowledge right it's sort of like first you tested the airplane can fly and then eventually you test well how

50:22

long can the plane remain unused uh without deterioration of the seals engine components and stuff like that

50:29

that's like the next level of testing so they just went for it

50:35

I think maybe I'll look a few more comments here uh it's still good man exactly Paul

50:42

sometimes it's just good enough it's just good enough you just go for it

50:47

um uh take a break Mark uh I'm taking a break right now Ed I am going to uh we

50:53

have a uh a birthday party here tomorrow for a family members so uh I have some

50:58

stuff to do and I just wanted to get this out there uh today to keep the peep the pace up I

51:03

felt sad I I felt as I deprived you guys by taking this part down from the Sunday show it's really important this is

51:11

really really a key statement that this pipeline was in was in the

51:16

works things changed remember in warp speed they threw the schedule off there's a

51:22

lot of curveballs here this thing did not go according to plan

51:27

um the evidence suggests something very very dark in nefarious here

51:33

I could be wrong but the evidence looks very bad and that is a neutral statement it's not

51:41

for me to come up with a positive spin on it to ignore it it's not for us to do that it's just for us to put this out

51:46

there and people can digest in it digest in it digest it and then figure out

51:52

where to go from here all right guys so thank you very much God bless isn't Ramadan happening too

51:58

um um I don't follow up with the religions I'm not a Universalist however I respect

52:05

all people um uh it's but that's a whole nother story

52:11

uh uh we should we all must uh uh Baseline Baseline we all must respect

52:17

each other we're all born with our flaws we're all strange we're all messed up and

52:24

um usually the the biggest problems is usually in the mirror and not with the other people uh so with that said I need

52:31

to get outside and I got some stuff to do to get ready for this weekend take care everyone God bless love you very much thank you for joining I'm going to

52:37

leave this up on edited for for a while for at least a day or so if it gets a strike so be it uh and uh we'll be

52:44

streaming again I'm gonna try to keep the streaming Pace up maybe uh maybe at least once a day for a little while okay

52:49

guys take care foreign
