0:14

could you please introduce uh both of yourselves uh my name is rebecca

0:19

i'm the mother of daniel alvarez a 28 year old who was murdered by notwell health hospital in glen cove long island

0:25

new york and i'm steve jackson and i am the father of daniel

0:33

we've been married for 16 years steve has had died in a lot of ways although i was married before so he's

0:40

her stepdad so you live on long island yes long island new york did you grow up there

0:47

yeah yeah grew up there yeah yeah rebecca do you work in the uh the health industry

0:53

or no i'm in the interior design industry my husband works in the health industry

0:58

and steve you work in uh medical uh i sell medical equipment and uh supplies yeah to doctors offices

1:07

would you describe yourselves as people who have been um perhaps more or less relatively

1:13

accommodating and accepting of the medical industry probably most of your lives up until recently of course

1:20

uh i was accommodating of the medical system until i found out when my

1:27

daughter she was very healthy i was i had a healthy pregnancy and um they delayed her delivery because

1:34

of the hmo and she lost oxygen and i kept asking you know the doctors

1:40

for two years like why she's not doing what other kids are doing you know she's a little slower

1:45

and they said it's your child i went to a divorce with my daughter and um

1:52

and then i was a single mom and i took my daughter to church

2:00

and she was in the kindergarten and one of the ladies told my boss that

2:07

you have to tell that mom that that child has you know cerebral palsy

2:13

which is a form of oxygen deprivation and i had no idea what that even meant because i never had

2:19

anybody who was developmentally delayed or injured in my family circle so i never knew

2:26

anything like that i just depended on the doctor and when i went back to the doctor and i

2:33

asked him why it is you didn't tell me that's something that's wrong with my baby and this was two and a half she was

2:38

two and a half years old he said he didn't want to see me anymore i shouldn't question him

2:44

so that was a trigger for me to like you know i'm trusting long island jewish hospital

2:50

medical system an older doctor what could go wrong this is america

2:57

so uh she started special ed in um long island and um when she was five when she

3:05

was three then when she was five she went into the special education system and they had to push the ritalin

3:11

and they pushed all the drugs and started seeing a psychiatrist to give ritalin

3:17

and then it was a prescription for blood pressure and i'm like why are you giving her all these things i never seen a

3:23

child take these these medicines and my daughter was changing with the medicine she would just

3:29

just like a zombie like just quiet just crying bellies losing weight

3:36

so i started breaking the pills and i um weaned her off

3:42

pulled her out of school and learned um went to the

3:47

institute of achievement for human potential for her to be evaluated in pennsylvania

3:52

and that's where they put her on all organic gluten-free probiotics and

3:58

patterning and she she really improves and my daughter was was on a completely different platform after

4:05

that and that's where my mistrust came with the medical yeah at age five she started on the ritalin

4:12

latter role at seven and a half close to eight i took her off of everything and i

4:17

pulled her out of school and they sent cps for me to check on me

4:23

um but the case manager who came saw that that i love my daughter and i had

4:29

everything provided for her that she could not find any fault with me that i did everything for my child so

4:37

as a single mom taking care danielle and doing everything for her and working and

4:42

doing home school and also have an aide working with her at home i was fighting for my daughter all her

4:47

life uh danielle was was homeschooled

4:54

we were in queens at that time i got married and we moved to long island and danielle started um

5:00

in in new hyde park school of course special ed um

5:07

and then at 18 i started an independent support

5:12

group that i that they would come in the house and then help me with danielle like

5:17

to to train her to do a job so then we started helen she started volunteering

5:22

at sunrise assisted living she did that from 18 until the pandemic happened she was the

5:29

happy girl who talked to all the elderly who served them breakfast and she was just so happy to be there

5:36

and they were happy to have her because she was always hugging and and laughing and she was a light everywhere she went

5:43

she was just a pure soul so cove it started and

5:49

impacted all of us uh in 2020.

5:55

did anyone in the how the family hold up for 2020 early 2021

6:00

any any illnesses no no well daniel you know daniel is very healthy she never sees a doctor

6:07

unless she has to get her her wellness checkup um she has all her blood tests

6:13

you know every extensive blood test we always like on top of her health so none of us got sick in 2020

6:19

we went everywhere we went out we had dinner you know we go out um just she she was sad because she

6:25

couldn't go back to work at sunrise and she couldn't do any of her her activities you know her sports that

6:31

she played with all the other kids or the groups is sad for that she was very very very sad but we were all healthy

6:37

that was her social network that was her friend network yes she had a big social network she had three girls working with

6:44

her um she had activities you know from from you know

6:50

gym to music she go horseback riding she has acupuncture once a week she has

6:55

chiropractic once a week she never liked to be at home she likes to go out yeah i like her yeah

7:03

um when did danielle initially get uh show uh show symptoms of of illness

7:11

um daniel went back to camp in june the camp that she was going to and

7:17

this year not this yeah last year he won she was happy because everything went

7:23

back to normal so she had her camp and on august

7:28

19th was the first sign of symptoms one of the girl who works with her

7:34

worked with her all day uh they went to acupuncture chiropractor and something else and they

7:40

were in the same car and that afternoon the girl brought her home and said um i'm not feeling well

7:47

and i think i'm gonna get tested tomorrow so that was on tuesday

7:54

on thursday daniel started with a cough daniel usually get a call once a year

7:59

five days it lasts and she's over the cold um so on thursday she decided to call

8:06

friday she had a fever so we treating her with with what the

8:13

erythromycin um bite high dose of vitamin d high dose of

8:19

vitamin c zinc um everything all the natural stuff you know all the tea use oil everything

8:25

that we usually use and more and um a week later the thursday now she's

8:32

eating daniel is eating and drinking and walking and talking just a little you know slow because you know she want to

8:38

lay down and on thursday night i saw her breathing my stomach moving a little bit

8:44

more rapidly and that's when i did a pulse ox and i was in the high 80s and i got

8:50

scared that's that's no that's alarming okay and

8:56

we knew not to go to the hospital and not to you know we knew a lot but two weeks

9:01

before that happened i i ended up with diverticulitis and i called my neighbor who is a doctor and

9:08

he said go to the hospital and i went to my neighborhood hospital which is glenn cove not well held

9:14

england cove and while trusting i would be protected because he is affiliated with that hospital so i felt a sense of

9:21

safeness to go there and then they gave me morphine and

9:26

antibiotics intravenously and everything and they said they wanted to keep me and i said no i'm not staying i'm going home

9:33

so i took my prescription and my husband was there with me and i went home so it was not a bad experience

9:41

so two weeks so on friday when i called my same doctor my neighborhood doctor

9:47

and he said that i told her about the oxygen level even though daniel was eaten she was blocking she was talking you know

9:54

nothing out of the ordinary for coal he said take her to the hospital

10:00

so having that experience two weeks before i felt safe to take her just for them to give her

10:06

oxygen you know you're thinking they're just going to give her oxygen bring her home

10:12

and as soon as we walked in they told my husband he couldn't come in

10:18

um what was there justification just one person was allowed so just

10:26

just you rebecca yeah and my neighbor had called in the emergency doctor and told him that this

10:32

child cannot be without her parents because everybody knows danielle in the neighborhood she's been living there for

10:38

16 years everybody knows her in love so and um

10:44

they swabbed her of course and put a mask back on her face and they did an x-ray and they said she

10:51

has covered pneumonia i don't know anybody who had pneumonia

10:58

and it's a scary word to hear so i lost all sense of

11:04

you know my all sense of common sense common sense or everything i learned for the past
11:10

um teen years i just went out the door because i got they scare me because the doctor said to
me do you pray

11:17

that was the first day right yeah the first time in the emergency room yeah do you pray right

11:23

what what kind of question is that i've never heard a doctor ask that before yeah not at least

11:29

not on the first day yeah with the solemn look on her face like

11:34

you know you could only see her eyes through the mask and do you pray and it's like oh god
and

11:40

lord alone knows i would never have let her stay in the hospital that's an important question uh
the uh when they

11:47

say they had covert pneumonia whatever that is does that also imply that there was

11:54

a an active bacterial infection or was it just fluid

12:00

they just told me covered pneumonia double pneumonia double pneumonia double pneumonia
did they do x-ray

12:08

they did an extra emergency room but um they didn't do a spin on the speedometer yeah they're
supposed to do

12:13

a sputum test um if you have pneumonia that's how they do that's how they detect whether it's a

12:19

virus or whether it's bacterial or whether it's viral so they know how to treat you uh they never
they never did

12:24

that just you have covered pneumonia and onto them disappear and we'll get to that i guess in
your

12:31

questions um in her regiment that was one of the things that they gave her on the first

12:37

day they gave her rem deserver and they did not tell us you're supposed to get authorization

12:44

because it's under an eua approval it's not an fda approved drug

12:49

you're they're supposed to say hey listen these are the risks the risks of taking room to severe
are

12:55

this you know kidney failure uh this is experimental and you're supposed to sign off on that yes and

13:02

they did not give us they did not tell us she's going on this experimental

13:07

toxic drug so that was um that was the first one that was the first day among other

13:13

medications which she was on so this is the first day you walk in they take the swabs and the tests okay asking if you

13:21

pray that seems that's very premature steve you were denied access so she only

13:26

has one of her parents with her and how soon was she given rem deserver

13:32

and how did how how did they administer that did did they

13:38

were you uh did you leave the room rebecca no no i was in there they said i have to

13:44

treat her for covet they didn't tell me what drug it was so they started on an iv oh i begged them i

13:50

said could you give her monoclonal antibodies yeah i asked could they give her money

13:56

they said no she has fluid in her lungs so that's out the door no monoclonal

14:01

antibodies but yet they give her fluid in ivy form with the rem de severe

14:09

i if i was in your shoes i would have just assumed that it was an iv antibiotic or

14:14

something yeah knowing that my doctor who is my

14:19

neighbor he's our neighbor friend they they come over every year for her parties and

14:25

dinner and everybody knows her and he called the hospital and spoke to

14:30

dr andrews and said this is my neighbor's daughter she cannot be alone thinking that she would get good care

14:39

did she show any resp any immediate response to the room deserved is it uh i mean i don't know anyone

14:46

this says a lot i don't know anyone who's personally had it i think i said i'm saying a lot by saying it that way

14:53

uh who i could talk to after the fact did she show any signs during it like it was painful or made her drowsy or

15:01

anything else at the time to make you go what's what's going on here

15:06

no i i fed her in the hospital that evening they brought food for her and she ate you know she was happy i was

15:12

there she keeps saying mommy are scared i want to go home i mean i want to go home i'm scared i want to go home because she don't like needles my

15:18

daughter don't like needles and this is the first time she'd been in a hospital since she was born danica was never

15:24

hospitalized or ever entered a hospital since she was born so 28 years

15:30

and um i was actually going to ask that because assuming that you filed a very healthy diet with her

15:37

i would not have been surprised if she avoided the hospital for most of her life and that so the answer is yes

15:44

okay um and then they brought us up to a room in the night it was about maybe seven o'clock

15:50

we got a room and they the room with just one door just danica

15:57

and myself and then the nurse came in and she was giving her medicine now in the emergency room they may be

16:03

signed a document to treat and you know the usual document you're not going to read it over you're scared

16:09

so i just signed to treat but not sign for not informed consent i was never given

16:14

informed consent okay so very good so it's seven o'clock

16:19

now on the on the day she goes in which i think was august 27th a thursday

16:25

night no it's friday this is friday now okay okay and um she has a room and

16:32

uh when she went in you probably didn't immediately know if she if there was going to be overnight or if it was just

16:37

going to be outpatient at that point is it clear that they're going to be keeping her for overnight

16:43

observation no when i went in i thought it was just to have a check and get oxygen i didn't

16:48

know they were going to keep her until you know the doctor scared me would cover pneumonia and she have to be

16:53

admitted okay and that's after the uh the rem deserver treatment did you know that the first

16:59

day that it was from desevere or did you find it afterwards i found that afterwards

17:05

uh when did you find out when did they tell you they never told me

17:10

they never told them they never told them they they never told you yeah so so what

17:17

happened is i'm going to fast forward a little bit um rebecca was getting very very sick she

17:23

was actually coughing and i was i got sick too i got sick and she got sick what day was that when you had to leave

17:30

how many days after so we went in on friday the 27th

17:35

danielle did not sleep friday night and this is very unusual because daniel usually sleeps through a storm music

17:42

fire she would sleep she's a good sleeper at night she didn't sleep she was up most of the night so i'm up

17:48

with her the next day you know she's crying again mommy i want to go home i want to go home you know this is unusual

17:54

for her to be in this place locked into a room just two of us in the room the nurses would only come in once or twice

18:00

and then bring us food or give medicine so on

18:06

sunday i asked the doctor i said could i see another doctor why is she still why

18:11

are we still here she's like all right i'll call another doctor so i believe it was she only came

18:18

in on the mornings that doctor did have wrongs in the morning no it was another doctor

18:23

and um monday afternoon dr ramanur

18:28

the i see new icu came in

18:36

looked at danielle not even touch her sat on the chin he told me sit down and he said oh

18:43

i want to bring her into the icu to observe her you know she'll have a bigger room with more people you'll have

18:50

glass windows you just wouldn't have a little window in the door she you know will bring her in so i am

18:56

thinking okay my daughter gonna get better fast and not knowing that icu is a hostage

19:02

trap it's a literally when they hold you hostage when you go into ico and i

19:08

agreed i agreed because i want my daughter better and a gentleman across the room the

19:14

doctor had told me he's going home and he was in his 30s i said okay we it's day five is day

19:20

friday saturday sunday monday day four days day fourth day yeah third day since

19:27

checking in but fourth day yeah that was monday on tuesday he came in the room

19:33

again now we and icu she had her dinner she had lamb chops

19:39

she ate well she sat crying because now they're forcing her to use the bedpan and daniel is independent she she likes

19:46

to use the bathroom herself and the force had to put pampers on when she went into the um icu

19:52

she no longer could use the bathroom she had to take out her pajamas which i brought all her pajamas from home my

19:58

husband would deliver her clothes to the hospital and he would take back my stuff so now

20:03

they said no no she can't wear her pajamas she has to put on you know icu clothes gong

20:08

you know pampers and daniel did not like that what was the justification for having to

20:15

use a a bedpan you don't mind my asking i mean it's not like she had a broken leg

20:21

no there was no justification but apparently the rem disavow was filling up the lungs with fluid

20:28

so they had to keep her on high flow oxygen this is what i'm finding out after the

20:35

fact so you found out after the fact that

20:40

one of the side effects that causes the lungs to fill up with fluid the very drug that's supposed to help

20:46

the lungs during the fluid they didn't give her they give her the one that fills up with fluid because it attacks

20:51

the kidneys and the kidneys can no longer get rid of get rid of the fluid that's the first thing that's the that's

20:56

the it's not a side effect of rem disappear it's the effect of using remdissevere is that it shuts

21:03

down your kidneys so it can't pump out the fluid anymore so it will build up in the lungs and they they know this so

21:09

that's why they do it and then they can say you know now we have to vent you because you have too much fluid and

21:14

you're not breathing correct so now on tuesday dr ramanu

21:21

said to me oh i think we're gonna need to put on a vent and i'm like no no no you're not doing that i said no no

21:27

you're not doing that no tuesday this is tuesday now this is tuesday now yeah he got me into the icu

21:33

on monday so on tuesday now he's telling me daniel needs to go on the

21:38

ventilator to help her to breathe and it would only be for a short time this is a dr ram revenue

21:46

fareed or something ramen and i've been sick because this is four nights i'm not sleeping five nights that

21:53

were they asking you to leave no no they knew i had but they keep telling me oh you know you're so lucky

22:00

nobody else gets to be here with their loved ones and nobody gets to be here you are all lucky

22:05

oftentimes uh all a family is one way or another encouraged to leave

22:12

making the uh the victim or patient more vulnerable yeah well that's what they did to me on

22:19

wednesday morning she didn't sleep at all tuesday night and i was getting really sick

22:25

so i asked the nurse ivan that's the nurse

22:30

i said could i please go home shower and come back and he says yes you could do that

22:38

i'm like okay so now she's asleep it's like six in the morning i said okay i'll sneak out i'll shower

22:44

get some food get some clothes and come back in so i left i called my husband he

22:49

picked me up an hour later they called and they said no was about eight o'clock

22:56

they called me and they said i cannot come back to the hospital unless i have a covid negative test

23:06

so they lied to me and this will obviously that was not known when you left that no you may not

23:13

be able to re-enter no i would have never left my child i would have i just wanted to shower

23:20

it's five days i just want to shower just just to help myself with you know everything she was really sick though

23:26

because i was talking to her on the phone she was really bad i was i was i started now getting concerned for my

23:32

wife so i was kind of like begging her you you've got it you've got to come home you've got to get out of there we got to

23:39

we have to take care of you and then i was getting sick not as bad as she was or i don't know maybe it was similar

23:45

yeah so my all my intention would just go home take a hot shower get some more medicine

23:50

and and come back to the hospital and when they told me that my heart just sunk

23:56

i just i didn't know what to do at that point because not only they told me i couldn't come back i said if i came on the

24:02

property i would be removed your police would remember

24:08

this is wednesday this is wednesday morning okay so so wednesday morning is when you went home in the morning yeah

24:15

to to to shower take get a break take some medicine and

24:20

when you is it when you went back in at the door or at the reception area they said you can't enter or is it how did

24:27

you know they they called me on my phone they called you so they knew you left

24:32

and then they said you can't come back yes they call me on the phone now did they call you after because her because

24:38

rebecca and myself both went to the emergency room to get treated that's um so after they call me and tell me i had

24:45

to show a negative test and so we called the doctor doctor my

24:51

neighbor again and i said i'm really sick i don't know if i have covid i don't

24:57

know if it's at all i don't know because it feels like a flu it doesn't feel anything different than the flu or you

25:02

know the body aches it chills it was nothing strange i could still smell so i wasn't you know i wasn't a believer of you know

25:10

it could have been something worse than that obviously i wasn't thinking that so my doctor he said he will call the

25:16

hospital and ask them to give us monoclonal antibodies he said they don't want to give it they

25:21

don't like giving it it costs too much money it's all political it's all money remember dr alan said that yeah yeah and

25:28

um so we went back into the hospital but through the emergency room they let me in obviously i couldn't go through the

25:34

front they would not allow me so through the emergency room they test me and i was positive

25:40

was positive they gave us monoclonal antibodies because my doctor my neighbor who's affiliated again

25:47

requested that and they did not let me see my child

25:53

uh were you in contact by phone uh no they would not let me talk to her

25:59

i i sent her ipad to the hospital they refused to take it up to the room so i could video call her i asked could i see

26:07

her could i talk to her they said no the ipad the hospital ipod is not working

26:12

this is not working i said well could you charge it i waited two days before i could have seen my daughter

26:19

on video and she couldn't even talk at that point they would not allow anything to go upstairs i said but my husband was

26:26

bringing my clothes and you all were bringing it up why she can't have her stuff now why can't she have an ipad why

26:32

can't she have her teddy bear why can't she have a things that would not allow it upstairs so when

26:37

i left that was a trap

26:44

did they provide any justification for why they can't deliver

26:50

corvid everything of it contaminated contaminated yeah it could be

26:56

contaminated and we don't want to bring it upstairs and then you know and introduce this into our

27:01

sterile environment yeah everything was left at the front desk one of the girls used to drop it off and

27:08

the wind and i would call five minutes later it's her stuff is downstairs no we can't bring it up no we can't bring it

27:13

up i sent a prayer claw they don't know where it is they can't find it nothing

27:19

so wednesday they didn't let me see i believe friday friday night i got one

27:26

video with her on the ipad and she couldn't really talk she looked

27:32

worn out she didn't even really talk she just looked right and we were speaking with her and i know my daughter have

27:39

anxiety and my daughter is scared and she have always had anxiety all her life so to put a child in that situation

27:46

without her family member and nobody coming into her room to even talk with her and comfort her

27:52

that was criminal by itself she never been alone daniel never been alone that's the scariest thing for her

27:58

is to ever be alone she's all like mommy i don't want to be alone mommy you don't want to be alone she always had

28:04

workers with her coming in the morning another one come in the afternoon take her out another one does activities with

28:10

her or school work or tutoring or music classes with her she had a full full

28:15

full life full activity so in addition to

28:21

uh uh being legitimately sick the last thing a sick person needs is stress

28:28

yes so this is one of the most stressful scenarios in addition to being sick

28:34

that she's being exposed to so now you're this is wednesday now you now you're in the in the emergency

28:41

room or as well and um did you stay did now were both of you

28:48

staying over wednesday hello no no okay so you had outpatient

28:54

yeah okay now it's interesting because you know she was actually in the well we're in the emergency room the out i

28:59

guess he called the outpatient and rebecca's in the room next to me so we're

29:05

not really too much allowed to see each other too much but uh but they did give us i remember them handing me something

29:12

and they said we're going to give you the monoclonal antibodies and here is the paper

29:18

that you have to sign and consent that you've read it that this isn't a ua you know it's an experimental uh

29:24

um approved drug and you have to sign this you know and give it and give it back to

29:30

us so they did give us the forms to see about an eua drug so they did that

29:36

properly and uh i don't know it took us about four or five hours to actually

29:41

get it to us to get it in a bag like what's taking so long oh because they're busy

29:47

giving it out on other floors and they're they haven't made their way down yet and uh so you know we we had the consent and i

29:54

had only heard good things about i mean i heard you would hear monoclonal antibodies yes i heard those were good

30:00

my doctor even said yes that's a good thing uh but no one ever ever mentioned the r word you know from this

30:08

not even once and so at this time wednesday did you know at this time

30:14

that that danielle had been uh given rem deservier yes no okay you still did not know i didn't know anything all i knew

30:21

about giving her i believe it was antibiotics because they didn't explain to me what would you get pneumonia you

30:27

give antibiotics what do you give for flu you give antibiotics and so

30:33

so wednesday thursday i'm not hearing the doctor let me call and give an update um then one

30:39

of the nurses said to me she don't need to be alone this is too hard for her

30:45

she needs to have somebody in the room now they have aids that would come into the room they never assigned an aid for

30:51

my daughter knowing the anxiety and the stress they tied her up to the bed

30:57

on top of everything they had her tied to the bed

31:04

uh and the excuse for tying her up is because it says she kept pulling the oxygen off her face

31:12

in whatever detail you're comfortable

31:18

i will tell you everything mark i'm not i'm not sharing um uh when did

31:23

so so you you heard on the phone from uh from a nurse or the care doctor

31:29

a nurse that she was being restrained or tied up yes i didn't

31:36

i i didn't know hospitals could do that yes yes i heard the hospital invented a man

31:43

because he was he was uh what did this say he was combative or something sort of

31:48

vented him poor people yeah pulled him down and to

31:53

vent him yeah so obviously if my child wake up and she don't see me she would she actually she

31:59

pulled all her ivs out apparently when she didn't see me she pulled everything out and she tried to get off the bed

32:05

that's what i heard so they had to redo everything and it told her that danielle if you don't keep

32:11

the oxygen on we have to restrain you so they did that my ex-husband arrived

32:18

saturday morning around maybe early in the morning maybe four five o'clock i'm not sure

32:24

and he was very upset at her condition the way she looked and it's hard when you have an

32:31

ex-husband and you're trying to to help your child because it's like a battle

32:36

the neighbor my neighbor had called steve friday night and said daniel need to go on the

32:42

ventilator that's what dr ramanu told him so i knew tuesday tuesday he said

32:49

ventilator friday night he's saying she need to go on the ventilator i haven't seen my

32:55

child only by video for like two minutes i'm scared

33:00

now i'm not thinking the ventilator gonna kill her because this is what the doctor say no she just need help

33:05

did they say uh a phrase that we've heard often is um it will give it will give the patient's lungs a rest yes yes

33:12

but this is only temporary time until yeah she gets her strength back and i asked him i said dr romney would

33:19

you give that to your child would you do this to your daughter and he said yes if this was my child i would do it

33:25

this is what he said to me basically saying he would kill his own child for money that's what he's that's what

33:31

uh far zen ramen ramen revenue f-a-r-z-i-n he's actually a a

33:38

d.o doctor of osteopath okay he's in critical medicine yeah

33:44

so um i had called my neighbor and said should i get a second opinion and he

33:49

said no dr ramanu is well known he works in all the big hospital and he's a very good doctor so they are

33:56

discouraging me from getting a second opinion and i'm trusting because you affiliated

34:02

with this hospital it's a well-known hospital it's in a very well wealthy neighborhood

34:09

and you're not thinking that this is you know that they would harm your child of

34:14

course not yeah so the ventilated talk keep coming coming so my ex-husband said

34:21

do not let them vent her and i'm like i know how bad she is and the doctor says she need it so it's like i'm not seeing

34:28

her they're not letting me see her now i can't see her and i accidentally said

34:35

please does she really need it and he said yes she needed so then i had to make the decision

34:41

to go ahead and do it so i said okay go ahead and go ahead and do it

34:47

they never let me see her alive before they did that they never show me a video of her

34:54

my ex-husband was there with her and that is

35:06

i didn't know they were going to kill her i could never tell me that just said it was just for a little while

35:11

to help her thinking maybe because originally they said three to four days you're gonna be in hospital maybe seven

35:17

at most maybe five so you're thinking this is gonna be prolonged so it's yeah as a mother you love your child and

35:23

you will do anything and you're trusting the one people that sign a hippocratic oath that will do no harm

35:30

and you have your neighbor who's affiliated and who knows all the doctors how could they hammer you wouldn't think

35:36

they would this is you wouldn't even think that this would be the way it would end even so they were asked they

35:43

they were well they asked so they asked your permission before they put danielle on a ventilator

35:51

oh pretty much yeah pretty much you said i have to do it she's you know you have to do it yeah so i had to agree

35:59

um i said what if you said no i mean that's speculation we don't have to answer if i was there if i was there

36:09

you know you're not seeing your child so you don't know you're not seeing you don't know

36:15

you don't know and you know how she's suffering in there without you you know how much anxiety she's getting you know

36:22

you you don't know if this leaving her like that it's gonna be worse you know you're hearing the word breathing oh my

36:28

god she's not breathing i i didn't know the horrors of the ventilator i didn't know

36:35

if she was restrained on uh wednesday or thursday i think i wrote down yeah wednesday morning

36:41

um was she still restrained through the weekend

36:46

or that was she given some opportunity some opportunity to move around no she was given no opportunity to get

36:53

off the bed when i was there so it was completely you know handicapped um

36:59

tied you down pampers you know one of the nurses had told me when i called in the night she

37:06

said oh i remember danielle yes she she grabbed me and begged me and

37:11

wouldn't let me go to to take her to the toilet she said she literally my daughter literally hugged her and would

37:17

not let her go so that she would lift up and take her to the toilet she wanted to go to the toilet she did not want to pee

37:22

in the pampers or poop in the papers yeah she said remember her she hugged me yeah she hugged me and she wouldn't let

37:28

me go she said please so my daughter was scared when she was in the bed was she

37:34

reclined or was she lying down lying down flat i mean yeah which is

37:40

like the i think the worst position you can be if you have fluid in your lungs yes yes that's what that's the worst

37:46

position i didn't know this again i didn't know it's everything went out all common sense went out the door

37:53

so this happened saturday or wrong maybe 11 10 30 11 o'clock

37:59

in the morning uh saturday when she was put on a ventilator yeah

38:05

okay so now she's on event and she's also i'm presumably still restrained and

38:12

uh being encouraged to use uh diapers or a bedpan for oh no they see they put on the they put

38:18

in a coma when she went on the air they completely sedated her

38:24

president's fentanyl propofol oh that's when they started it all yeah she was on fentanyl profafal

38:32

all the debt drugs vicomycin everything you could think about presidents presidents

38:39

yeah she wasn't awake when they put her down to to vent her so

38:44

i i had prayer groups all over the world praying for my daughter from england africa india

38:50

the eastern seaboard south america everybody was praying for danielle

38:55

and one of the nurses in england wrote to me and she said rebecca what is she on i hope she's not on ram disability

39:01

and i'm like what i didn't even know and i found out so

39:08

i accidental i called the doctor when i found out about ram de severe and i say i do not want you

39:15

to give her any rem this severe and he said she's already finished 10 runs

39:21

she's not going to get any more she got 10.

39:28

how many rounds of israel deserve here uh typically administered in multiple

39:33

rounds yeah yeah five round it's five rounds which is over over five days

39:38

so she got two rounds of the death drug some people die on three rungs of that yeah

39:44

you know they're going to kidney failure on the second day so she got two sets of five rounds in

39:50

yeah one one two three four ten days ago ten days in a row they didn't even stop to take a break

39:58

test the kidney functions you're supposed to test the kidney functions and the liver functions every day

40:03

i don't know if that was done i mean if they would have tested it they would have stopped they would have stopped the

40:08

rendissave so well i have all her medical records i just can't bring myself to look at

40:14

them as yet and then and then saturday

40:20

it said i think it was like 8 or 10 a.m was no around 11 00 a.m they put the

40:26

event around that time late morning yeah okay and you still have not seen her in person since you

40:32

left the previous week just a couple of minutes maybe

40:37

on and that's it ipad on friday night

40:42

now daniel is very talkative and chatty and you know she you know daniel be quiet daniel you know just so for her to

40:49

look at you in the ipad and not talk it's very you know very unusual

40:54

well with all those drugs all the drugs are probably what they're threatening her until if you want to see

41:00

a mommy you better be quiet you know um i'm sorry did well i think probably trekking her

41:07

in there and say if you want to see your mommy you better be quiet because she was quiet

41:15

that's that's that's what you believe she might have been told yes okay

41:20

okay so this is uh saturday now um you're you're back home are you are you

41:26

yourselves are you feeling a little bit better after the treatment we started ivamekting um

41:33

i was doing the nebulizer now i knew to do the nebulizer i knew um

41:40

we were doing a lot of medicine and then my doctor had sent in medicine um herbs uh the acupuncturist has sent

41:47

herbs for us so we were getting a little better silicone the fever the cough was non-stop the cough was

41:53

what's really about the cough what what could what would you like to share next after the

41:59

saturday 11 a.m well i start looking up ventilator

42:04

hospital protocol because i asked the doctor could you give her ivamekton

42:10

and he said no we can't he said i'm going to ask you know the department and

42:15

he called me back and he said no they can't give iva mc10 so i say okay if you're not going to give it i'm going to get it i'm going to make sure she get

42:22

i'm going to go to court i literally said that to him i you don't want to do it i'm going to go to court

42:27

so i hired ralph lauringo because i read stories where the patients got ivamex in

42:32

and they were able to come off the ventilator they were breathing on their own after the ivermectin and i

42:38

and i hired them and i got the court order i probably hired

42:44

them on monday or tuesday and i got the court order the judge signed to immediately on friday

42:52

immediately administer ivor mctim immediately

42:57

so my friend was a pharmacist he brought the ivormectin to the hospital

43:03

and um they didn't give it to her and um they all knew what was happening

43:09

because the neighbor who is a doctor his wife brought the court order to the hospital showing them because they're completely

43:15

ignoring me i said where is the court order did you get so she handed it she brought it there and she delivered it to

43:20

the administrator administrator that this is a court order from mineola court

43:26

that this child need to get ivan acting immediately friday night i called no

43:32

the legal department looking over it no she didn't get it just yet i talked to the nurse nurse laura she said that

43:38

doesn't work that's what she said she said it doesn't work so i got no encouragement saturday

43:44

morning i called i don't know if they ever give it to my daughter they pacified me so it would have been

43:51

saturday sunday monday i am free i could come back to the hospital

43:57

so i came to the hospital covert free brought my paperwork from the doctor that i don't have covered

44:05

and i went straight to her room and she was upside down she was laying on her stomach

44:11

in a prone they call it prone in position and she was swollen my daughter was swollen

44:18

and i'm like why is she swallowing a sword like that oh it's the covert it's this her hands are swollen

44:25

her body looks swollen then the doctor called me to talk to me and he said her liver enzymes is very

44:32

high now at this point i knew about from the severe and he said we have to stop the

44:38

ivormectin because it's raising her liver enzymes and i'm like you'll give her tylenol

44:45

tylenol raises the liver enzyme all these medication you give her raises in liver enzyme

44:51

no we have to stop the ivormectin it is the ivormectin

44:57

so that was the third day so if she had gotten it saturday sunday

45:02

monday i'm in the hospital they told me they can't keep giving it to her

45:07

because it's damage in the liver and now i said to them in the nurses station and the doctor's station with all the nurses

45:14

there i said rem this severe does that

45:20

one word not one of them answered me as if they knew as if they knew there was no rebuttal

45:28

and i i remember even mentioning it to the uh the physician's assistant who was in charge at night

45:35

and i told him about uh you know you're using him disappear that was that was a drug that was stopped during the

45:41

ebola trials why would you why would you use that because of kidney failure and and and death and

45:47

half the people they did it on he he just looked at me and didn't even didn't even give me an answer to that so

45:55

we have uh after she has gone on the ventilator on a saturday morning 11 a.m

46:01

you went to go get a court order for uh ib for ibuprofen

46:07

for ivermectin excuse me uh administration they approved it the next week and then they dragged their feet

46:12

made it to the weekend said no and then ultimately stopped on monday

46:19

so this is she has been now on event for

46:24

nine days he sedated right now she's sedated for nine days

46:30

yeah completely sedated not only sedated she was paralyzed

46:36

they call it a paralytic paralytic drug so she's paralyzed now and sedated

46:42

what are the side effects of a long-term sedation like that i'm not familiar with many side effects i'm finding out now

46:49

those drugs shouldn't be mixed together pre-seduction been mixed with this one and you shouldn't be on presidents for

46:54

so long it's a lot of side effects in conjunction with everything they're giving her i mean they were killing her

47:01

they were literally killing her i mean fentanyl is an end-of-life drug yeah or

47:06

uh extreme extreme like a battlefield injury

47:12

temporarily it's not meant i don't believe for 10 plus day administration yeah for

47:19

10 days okay so on monday when i came back in two

47:24

one of the doctors came to me i think was juicy and tell me the right side of her heart is not working i like

47:30

what the right side of her heart doesn't my daughter have no heart problem she's

47:36

healthy and she's strong i mean if if dany will grab you she could break your arm she's that strong

47:42

uh telling me the right side so i'm just hearing these things and i can't believe it i can't question it because they're

47:49

telling me that again you're lucky to come in the ward you're not you know nobody's allowed to come into the room

47:55

you are so lucky you know again the threats you know again say the manipulation that oh you know you're so

48:01

lucky pretty much is that don't question us

48:07

why why do you speculate why do you believe there was uh this sense of hostility towards you

48:13

i think what i see now is the medicaid the 20 bonus daniel obviously is colored which i saw

48:20

that a lot of the people colored disabled she is you know classified as uh

48:27

learning disabled however they put it in in their reports because she's not you know

48:33

um and that nurse nurse laura said to to me it wouldn't work and word around

48:40

the hospital is a very small hospital that would you believe that they want to give her horse medicine

48:46

so i don't even believe she even got one dose of ivametan i mean how does these nurses and doctors

48:52

see people dying every day and not even give them a chance to try something else if you know

48:58

that they're gonna die so on monday you said that she was on her um

49:05

stomach on her stomach and they said that she her the right side of her heart right

49:12

side i don't i don't know how they identified that i don't know i don't know she's not complaining of discomfort

49:20

no because she's paralyzed yeah can't talk to me she can't see me so when they finally turned her over

49:28

her chin the skin was bruised off her chin and off her forehead so i don't know how many hours they had

49:34

her on because the skin peeled off here that had to be a very long time

49:39

when was she turned over um later on that day later

49:45

yeah so she might have been that way for multiple days

49:51

yeah i don't know i wasn't there i don't know because

49:56

they wouldn't let you in yeah okay so monday she's turned back over

50:03

she's still under she's still on event yeah uh and she is on a

50:09

lot of medications to keep her paralyzed and sedated and she's tied up or no

50:14

she's not restrained anymore because she can't move uh meaning she's getting fed and getting

50:19

fluids all intravenously yeah presumably okay the very thing that they didn't want to do because she had fluid in her

50:26

lungs it's not to give her monoclonal antibodies but now you're pumping all this fluid into her and she's swelling

50:31

she's she's literally swelling because the kidneys yeah as you mentioned before kidney function

50:38

is reduced with remdezavir yes so i don't know if my daughter was even

50:44

getting fluids like when i was in there you know who was coming in the room to give her something to drink who was

50:49

coming in the room to give her some juice or some water she drinks a lot of watermelon

50:55

but they were not coming in the room so this is brings us to uh towards the

51:02

end of monday uh what's the what happens after this well they made me stop they made me

51:08

agree to stop the ivamekton okay and every day i would go back in there
51:14
from 12 to 6 i would clean her pray with her rub her i play her christian music all
51:22
her favorite songs all her children music and one day i came in
51:28
and i lift the blanket up and she was full of feces all ha
51:34
gang everything was wet up to the arms so she was literally sitting in a pool a
51:39
feces for i don't know how many hours i took a picture i took a picture
51:47
what day of the week was that if you can recall i don't know it was the first week i
51:52
started coming back so it probably was wednesday or thursday i don't remember
51:58
i would have to check on my phone she was on eight different machines in medicine
52:11
so at this point on this wednesday this week we're coming up on two weeks
52:16
as of that saturday uh what was she still alive on that
52:22
saturday yeah okay so two weeks are you still able to go in for a few
52:28
hours each of those days to yeah every day from 12 to six
52:37
most of the times i would go in the nurse would come and then give the medicine and then talk
for a
52:44
few minutes um but nobody was even telling me that you
52:49
know your daughter might die we need to do this nobody said anything like that nobody give me
an inclination that this
52:55
is how it's going to end even though they seat every day with what they're doing nobody so i
53:01
i sort of put those things out in my head because i'm praying and i'm trusting that she's gonna
come home i
53:07
put her pajamas on the bed and her shoes next to her bed and saying you know daniel you're
coming
53:13
home soon your things are waiting for you nobody nobody said that
53:18

wasn't thinking that uh the last uh this last well these two weeks uh did you have any opportunities

53:25

to see her without a ventilator on no no she was in the hospital for 40 days

53:34

okay i that's how strong my daughter was she was very strong

53:41

oh wow 40 days a night man god

53:47

god bless her strength and you as parents i uh i i i apologize you when i i've

53:55

interviewed people who have been through this before and i've never heard of

54:01

40 days 32 days on the ventilator

54:10

so for 32 days you did not get to see her teeth or her smile

54:15

no um no brain before she passed

54:21

i begged the doctor to please give her the ivormax and he's like it's juice it's gonna die i soak it and just give

54:27

it a little dose just please give a ton of low dose just give it in a low dose

54:33

so they give it a low dose for that point the dosage would matter because she's very good so he keep coming in

54:40

with this look on his face that what did he say to us i i one time i said to him i said i

54:46

don't want to hear your reports anymore i don't want to hear your reports anymore don't even come in this room and

54:51

talk about your reports anymore oh this is going bad and that is going bad and you know it was just so negative but

54:58

nobody coming to you and saying listen we have a case here we might need to do this we might need to do that no no it

55:04

was nothing to prolong her life it was all to make money so

55:09

two weeks before she passed they told me that we're going to do the trach surgery

55:15

and i'm like why can't he just take her off the ventilator without doing the surgery you're not gonna cut her do not

55:21

do that to her so he's like no this is the only way so the nurse

55:26

convinced me the next day that this is how they wake them up in order to wake her up for daniel to wake

55:32

up and get to come home the need to do that surgery and ease her off of the ventilator

55:40

the need to do the surgery so that was a trap for money

55:45

soda needed to put a feeding tube in her belly and then the doctor came in to do the

55:51

surgery so i said okay i said all right we'll do the surgery could we get into more than to wake up could we get into more oh no we have to wait till the

55:57

oxygen is is um she's under 50 on the ventilator before we could do the tracheotomy

56:03

um everything sounds good believe me to tell you everything like it's gonna be okay don't worry it's gonna be okay

56:10

so they took her in i think was probably four days later to do the surgery

56:16

and that's when she came back out that's the first time i saw my daughter face because all the time she had this in her

56:23

mouth and her face is like this and and i asked them to if i could get the

56:28

stuff to wash her hair so i washed her hair because she always had dry blood every time they call me

56:34

they want to move the uh what they call that pickling the picc line i have to move it from the neck to move it to the

56:40

groin to move it to here i mean they keep moving the picc line because she continually had infection

56:46

bacterial infection disinfection every day is another infection and i'm like

56:52

how much antibiotics you've given her i said she she's never used it as much drugs my daughter never was on drugs

56:58

after ritalin she never was on any kind of drugs the only thing danielle took was a armor thyroid

57:04

pill that was it for her thyroid but daniel never took any kind of drugs

57:10

i said she can't handle that all these drugs so they uh

57:17

they do the surgery and they start less than the medication that's what they say

57:24

and i think that took her off the presidency um the comatose drug but she was heavily sedated because even though

57:30

they took her off the president's she wasn't moving she wasn't awake opening her eyes or

57:36

anything like that and they said i have to keep up like keep her like that and they're going to wean her off slowly

57:41

um the nurse told me that um when she stick

57:47

her finger now she's on insulin my daughter is on insulin she's on blood pressure medication

57:54

hot medication propofol fentanyl everything i have all the list of all

57:59

the medication and one time they were cleaning her mouth and she bit the teeth she bit the tube

58:06

so she was literally trying to wake up because she held onto the clenched with her teeth

58:12

and i kept talking to her but she wouldn't open her eyes she would just she was she probably was so scared

58:18

not being able to to get out of this this paralytic position you know

58:24

she she didn't turn she didn't move so after the surgery maybe

58:30

i would say four days later i heard the bad news oh we have to put her back on presidents

58:37

because she's getting agitated and she's uh a heart rate a heart rate was going very high so they said and then dropping

58:44

and she's kind of waking up and but she's getting so nervous as she wakes up so we got to put her back to sleep so it

58:51

was like comatose what about comatose huh so one of the nurses when she came to

58:57

that night i stayed late and she said oh my god why is she back on all this medication she was doing so good and i'm

59:03

like i don't know the nurse told me a couple nights ago something went wrong and they had to up

59:08

the ventilator and up the medication again so obviously i believe night time they weren't doing a good job but

59:14

ultimately that was the goal was to murder

59:20

they did nothing to save her life ma nothing to save her life

59:27

uh of the 40 days 33 days she was on a ventilator uh how

59:33

many days into that was the the the trach surgery

59:38

about and i apologize it's such an extended period of time

59:44

it's a hearts it's uh i would say i wish if i had the dates on

59:49

me i would pay maybe day 28 day 28 okay probably i'll give it a

59:57

cut the correct dates i'll email it to you yeah yeah

1:00:02

so it was about two weeks before she passed

1:00:09

okay so 28 days after she arrived at the hospital okay yeah and then

1:00:15

and that was two weeks before she passed yeah now at this time

1:00:22

you rebecca are going in to visit her every day presumably you are

1:00:28

not working at this time uh steve how is this for you having to

1:00:35

go to work and uh and uh you know put on a happy face as to why someone's gonna return on investment

1:00:42

if they buy something yeah yeah well it was um well i started to um go back

1:00:50

i was allowed in the hospital with with my wife i think the last no we were allowed we allowed one at a time either

1:00:57

him or myself right um so he would go but steve works from home

1:01:02

so he had the opportunity where he could go to the hospital yeah i could go to the hospital because i mean i worked for

1:01:08

my car i worked from home i don't think i went you know my customers are in the city

1:01:13

brooklyn queens staten island jersey and i just uh it's all a fog back then but i would

1:01:20

doubt if i went in at all i don't i don't think i did no he didn't go to work i didn't

1:01:25

yeah i was just basically communicating with her we were back and forth of course yeah it was very it was very hard

1:01:31

on me um trying to work and do this at the same time almost impossible yeah i mean emotionally it's

1:01:37

just straining very draining emotionally and you just don't know your limbo absolutely and things are

1:01:44

changing every day and every day you're trying to get them to help a bit more and they are not

1:01:51

yeah well i did ask for an advocate no one never called me and when they say they're gonna take the

1:01:57

trick they're gonna put the trick on her and then she will go to rehab they'll send it to rehab all the good promises

1:02:02

everything that they're promising you i said i don't want her to go to rehab i will change my whole living room i have a big

1:02:09

house she will bring in all the equipment there and she will be at home and she will get rehab at home

1:02:16

and i called the social worker and i told her listen i want my daughter transferred at home for rehab because

1:02:22

i'm thinking okay they did the trick surgery she's going to wake up a couple days she's going to be home if she wakes up she wants to be home she

1:02:29

don't want to be in a hospital if she wakes up but she's not waking up unless they he's not waking up

1:02:34

unless they take her off the medicine yeah right but you never did yeah now which didn't happen whatever we're going

1:02:41

to do and they keep coming back in and doing the hot ultra song and saying oh it's not good the heart is not doing

1:02:47

good and i just didn't want to hear it mark i did not want to hear it i didn't want to hear those words

1:02:55

yeah you know the bible says they're never to not to accept an evil report so we would just never say we only we only

1:03:02

accept a report from the lord which is good the lord is always good

1:03:07

and if the condition is bad uh you you talk about what can con

1:03:14

constructively be done was any and it sounds uh like there was not

1:03:20

no there was nothing there was no discussion about what could we do together better it was

1:03:25

only what they wanted to do to make the most money

1:03:34

so they knew i was going to take her out and she was going to do rehab at home

1:03:39

i had called the insurance company i had called her case manager they had called the state to find out okay as soon as

1:03:45

daniel get home they will send the bed home for her the nurses will come everything so i was happy at that point

1:03:52

i was like okay she's coming home now we're gonna wake up we're doing the trick we're doing everything according to what they say she's going to come

1:03:58

home and this is but uh see the trach was day 28 so

1:04:04

that was about 12 days before so you're having these conversations about 10 days before yep starting to

1:04:11

plan for the the hopeful the hope that she will come home and you'll make whatever changes

1:04:17

you need to yeah yes it's very hard to come there you don't recognize her

1:04:24

she's swollen you know the doctors had to give her lasix so then i see the

1:04:29

swelling went down why did i have to ask that's that's yeah lace sticks

1:04:35

it's to to remove fluid from the body okay so

1:04:40

she would produce a lot of fluid and then i would see her hands get a little bit normal but her upper body still the upper

1:04:47

cavity still had a lot of swelling you give it to people with heart failure too lasiks

1:04:55

so give it to heart failure patients now you see why they were doing that because haha was failing her from what they were

1:05:02

doing where would you like to start this account next i'd like to start after she had the

1:05:09

trick okay please please so after that after the trach which was day

1:05:15

28 exactly or approximately out of 28 days after arriving and about

1:05:23

14 16 days after going on a ventilator 28 days okay so what happens after uh

1:05:30

that uh that operation i was optimistic the doctor said she did well she did very well she did good on

1:05:37

the you know through the surgery i was so optimistic that she gonna wake up and she gonna come home

1:05:42

so my heart was okay this the rough patch is over you know the hard part is over now i have to prepare

1:05:49

for her coming home and we're going to have therapy we're going to have everything and i'm going to advocate i advocate for my daughter all her life so

1:05:56

i will do everything to make sure she gets everything she need to get back well

1:06:02

and that's when they knew they knew i'm a fighter that's when you know

1:06:09

a couple days later she went back on all the medicine the doctor said we have to put that back on the president

1:06:15

and um but every day i would go there i would wash her hair curls her hair put the hair in curls

1:06:21

put cream on her body the nurse even had the audacity to tell me my goodness she

1:06:26

has such good skin she don't have any bed sores

1:06:33

it's just this is the shocking things that they would say because i bring all her aloe cream and

1:06:38

special creams for her skin and i would when to clean her i would help wash her in the bed and then i

1:06:44

would cream her and make sure she's clean and it's absurd the things that they say the

1:06:51

comments they make so this went on every day

1:06:57

and i believe it was the weekend before she died

1:07:03

she's back on everything and her heart is going like the heart rate's going really high 145 right it

1:07:10

was going really high the doctor said oh she you know that they have on heart medication now i

1:07:16

think for a couple weeks and blood pressure medication i'm like why does she need blood pressure medication all

1:07:21

because it's the balance of the heart and the the blood pressure but a heart rate of 145 while she is

1:07:31

sedated sedated so one day my husband came into the

1:07:36

hospital if i was waiting outside so he could see her and he said to pray for her because he would go in there and

1:07:42

pray for her every day so now he was really pouring loud in the room and apparently she was

1:07:48

she was reacting to it and the doctors ran into the room and said no no no you can't you can't do that slow down don't

1:07:54

don't you know because her heart rate was going on her blood pressure was going up because she was hearing me she was she

1:08:00

must have been hearing me because she was getting all excited and um

1:08:06

yeah so we had to stop that and that's when they called me up they said they told the front desk to let the wife

1:08:13

come up steve said you know they're calling me to let us vote up and that's when he sat us down and he said this is

1:08:18

critical um i don't want to hear it anymore this is critical and what else she said

1:08:24

that's when him and the other doctor was there and um

1:08:30

so that's like the week before she died so the weekend before she died um

1:08:36

it was a saturday i believe i went to the hospital steve and i would now be able to go in together you know so since

1:08:42

he spoke to us and tell her this is critical now they're allowing both of us to go into the room with her

1:08:48

so i remember when i came in and it was

1:08:54

chaos in the room i was like what's going on they had to take this off and put the stuff and pump air into

1:09:00

her and and they the oxygen was dropping she was down to the 80s now every time her oxygen

1:09:07

dropped the screen would come on and a nurse would come on screen to check to see what's going on

1:09:14

so this particular day um dr ramanu came in

1:09:20

okay let me just backtrack i'm sorry it was the weekend

1:09:26

we came and we were there all day with her and um

1:09:31

the pa was there yeah and he said um her kidneys are working for

1:09:38

now her kidneys are working for now like they're expecting the kidneys to just

1:09:44

drop off i've never heard a doc talk like that your heart's working for now means you're normal but that's so that's so

1:09:51

negative that's just expecting the worst kidneys are working for now continuously but i

1:09:57

never got to speak to an advocate in the hospital they never called me i wanted the social worker called me after i kept

1:10:02

calling that i need to get things ready for her to come home to get down

1:10:08

so that saturday night when they said the kidney's working for now how do you answer to a doctor and i said to him i

1:10:14

said the ram disability did that and he didn't know what remdi sevilla was i said do you know what ram disavia does

1:10:20

he's like no and he's a doctor he's a pa

1:10:26

did he at least know what it is he didn't know what it is he doesn't know he doesn't know

1:10:32

okay so that's saturday the doctor did not know what ram deserve was uh but you bring it up as uh

1:10:38

saying that that's an explanation for why the kidneys may be failing because from that

1:10:43

severe is so stressful and dare i say destructive and toxic to kidneys

1:10:50

yeah so you know during that time it would be back and forth with a respiratory nurse a respiratory coming

1:10:56

in and always like you know trying to adjust the um the ventilator

1:11:01

or just you know her machine every time the oxygen just goes down and that's saturday night um

1:11:08

there's a lot of chaos with the respiratory nurses and the doctor and and it i just got so scared when the

1:11:14

doctor told me the kidneys are working for now and then her condition is getting worse and

1:11:19

i just dropped in my knees back and i just start praying in the room and saying god please don't let this happen

1:11:25

to her don't let this happen now because i'm dealing with people who's not even

1:11:31

helping me to help my daughter that's supposed to do that and i just prayed

1:11:37

and then they were working behind the room and i came out and i spoke to the doctor who's working under dr ramanu

1:11:42

he's um like a student doctor and i said to him he said she would need

1:11:48

a life she comes out there she would need a lot of therapy i say i don't mind i said i will do everything she will

1:11:54

come out and i remember telling him that you know david just had three stones

1:12:02

and david took down the giant and i said my daughter's gonna come here and she will serve you all food and cookies and

1:12:08

she will bring sandwiches because that's who daniel is i said she's gonna come out of this but i got no encouragement

1:12:15

no encouragement that my daughter would live knowing kai was like she's gonna die they're not saying it flat out but

1:12:22

they're not helping you to help her

1:12:28

so that was happening um and on monday

1:12:33

you know we go back in again sunday every day and it doesn't look good because you know you're watching the oxygen and you're praying and then

1:12:41

that monday i believe it was that dr ramanu went into the room and he was using the um stuff

1:12:48

you know to pump the air and i think he took the the sensors off her head which measures the brain

1:12:55

activity eeg yeah he's probably doing the eeg and um

1:13:02

he was going like this to call him the maestro that's what they call him they say he's the maestro the ventilator so

1:13:09

he was in the room doing this and i'm looking outside you know the glass

1:13:14

because we're working on her why is he doing his hand like this you know now i know why he's doing his

1:13:20

hand like that because he was killing her he was killing her

1:13:25

so he came out afterwards and he said the next few days going to be hard and i

1:13:30

didn't know what you meant that's what he was saying the next few days are gonna be really hot we're like why is he saying that how does he know

1:13:37

that so daniel was swelling now really bad

1:13:43

and that day when i came in the urine was usually is a lot of urine

1:13:49

and i'm like why shouldn't he have this much and she's so swollen and it's brown it's not no longer clear

1:13:56

yellow urine it's brown and it's just this tiny amount and they can't tell me

1:14:03

so she's swelling she doesn't look anything like danielle and

1:14:11

and they're not telling me yet that she's gonna die because i know i would fight they're not telling me that she's

1:14:16

gonna die and um i remember calling and asking him could you put on a lung machine they say

1:14:22

oh no but this hospital doesn't have the lung machine that's in a big hospital i said could you transfer her to the

1:14:27

bigger hospital that says if we move her she would die she won't be able to handle the transport

1:14:33

so all this time you knew that this would happen you knew that she would get critical and you didn't stage

1:14:39

any intervention i call a kidney doctor move her to a bigger hospital you didn't do anything

1:14:45

you just let her die make you money and the dire one of the directors in the

1:14:51

hospital she was there i believe on monday because one of the nurses

1:14:57

danielle nurse was not able because he had to leave there was an incident with another patient

1:15:02

and all she was doing was just scanning and putting medicine in danielle

1:15:08

and this went on

1:15:13

and it was scary because every time you look the oxygen going down the low 80s 70s

1:15:20

you know you panic and um we stayed with her all night tuesday we left like a wrong 11 or 12.

1:15:26

yeah it was late that night yeah and i couldn't um i couldn't sleep i literally lay in bed and all of a sudden my body

1:15:32

started convulsing i was just shaking and i couldn't stop shaking and they call five o'clock or six

1:15:39

o'clock in the morning about four or five o'clock in the morning wednesday morning the same doctor who said

1:15:46

her kidneys are working for now said that we should come in i don't like doesn't look good it doesn't look good

1:15:52

it doesn't look very good yeah you should come in yeah so we

1:15:57

we always say we're not gonna believe anything to tell us we're gonna go in there and she's gonna live we're not gonna accept anything they're gonna tell

1:16:03

us and when we went they had all the doctors and nurses and everybody outside

1:16:09

the room you know that all to bring the the machine to do yeah the defibrillator

1:16:16

crushed tribulator on top of the crash car with fresh caught medication everything there so dr iqbal came in and he said and we

1:16:23

praying and playing worship music and praying and he said um

1:16:29

you know just let her pass and i'm like what do you mean let her pass

1:16:35

he's like well there's nothing more we could do just like i said no you're going to resuscitate her because i never signed a

1:16:42

dnr i said you're going to resuscitate her right he's like that's all in the movies that's what he tell me

1:16:48

that you know just let her let her let her pass and i said no i want you to reset

1:16:55

the tata so this was the wrong nine something i'm fighting with them

1:17:01

i i said you know because i'm not believing i'm not believing my daughter gonna die i'm not believing that she's

1:17:07

gonna die never believed it for once not for one time and

1:17:12

they all came in the room and they started to do chest compressions

1:17:17

and i said please please resuscitate her please and that's when they were doing the chest compression everybody's in

1:17:23

room and they're clocking it and the timing and then they go with the epi epidural the pen the epinephrine yeah

1:17:28

that friend one two three you shoot it enough one two three you shoot a little one in a pump

1:17:36

and i'm afraid to look and i look on the corner of my eyes and i see blood coming out of the tube and

1:17:41

it's the way that blood coming from and they said it's because they're

1:17:48

pumping up

1:18:00

1006 or 1204 whatever yeah that's when they called me

1:18:06

they were doing it because we saw the heart rate going up because while we were there for like six

1:18:11

in the morning the heart rate was going down even to 70 60 and then it would go up again it would go down again and it

1:18:18

would go up so when they were doing that we were like look how hard it is coming back and it will say no it's only because we do

1:18:24

doing the yeah so so they called it and then uh

1:18:30

she screams and we scream and then and that was it and that was it that was

1:18:37

a day that will live in infamy

1:18:47

did you get uh [Music] did they leave the room and give you time yeah with danielle

1:18:56

i said i will step out if you could just because i can't see the blood i will pass out if i see all

1:19:02

that blood and they said it will clean her up and you could come back in and we stayed with her till like two

1:19:08

o'clock almost three o'clock and my friend who lost her daughter and she said becky you don't want to be

1:19:14

there when the potato cover up or put in a bag you will never want to have that memory again

1:19:21

so we prayed i held her hand i have pitied of me holding her hand

1:19:28

but she was so swollen she didn't look anything like her and after a while her face gave a smile

1:19:36

yeah at the very end we saw a smile on her face when she's already passed and

1:19:42

i said becky look she's actually smiling like uh we had never seen that expression on her

1:19:48

face the whole time we were there and i said look she's happy now it's

1:19:54

surreal it's it's what's going on with the lord

1:20:00

it's surreal honestly it's surreal it's not real it's not it's like the worst nightmare that you can get out

1:20:07

that i don't even believe she's she's gone it's like it's so hard to believe that she's gone she's not here

1:20:14

so and then it began then we had to check

1:20:20

and then my husband we said we're going to get the medical record so that same time we left the hospital he went the

1:20:25

wrong to the back and requested a medical record because we knew we suspected something was not right here

1:20:31

you don't kill a patient you do not not try to save a patient and for 40

1:20:36

days they did not try to save my daughter so

1:20:42

after she passed and i know this because my family has gone through this recently

1:20:48

there's another story that starts after that and that's the uh you know the memorial notifying

1:20:55

family uh carrying her wishes out is there any

1:21:01

would you like to share any of that story before talking about the pursuit of medical records afterwards or would

1:21:07

you rather talk about the medical records not the other form okay okay so we'll talk about the memorial um

1:21:14

this was wednesday i had to get a funeral home um

1:21:20

so we found a really nice funeral home in glen cove and they were very kind and very nice and

1:21:26

my birthday is actually october 9th and my daughter died october 6th

1:21:33

and we were going to have the uh funeral on my birthday

1:21:40

and the autopsy had to be done so that delayed it we got the autopsy on friday they did

1:21:47

the autopsy on on friday night so we scheduled the funeral for october

1:21:53

10th um my pastor and everybody came everybody who knew danielle the bus

1:21:58

driver who tania loved buses daniel loved school buses she had her own private bus come to pick up every day

1:22:04

when she went to school and the bus company is one block for my home so she would always love to go and

1:22:10

walk past and get so excited every time she see the buses um all the bus drivers who knew what

1:22:16

came to her funeral everybody from abilities everybody was in complete shock complete

1:22:23

shock that danielle died um uh pastor joe from sagha by zawa pasta and

1:22:30

he knows danielle he loves daniel he did the services and he said to me two times he said do you want to talk about this

1:22:36

and i said what are you going to say and i say i can't talk about it as yet and finally the day of the funeral i said i

1:22:42

just want you to do an altar call i want you to do an altar call because nobody life is promised tomorrow and he

1:22:50

said to me you were reading my mind i said that was what i wanted and

1:22:56

in her funeral we had the girls saying you want my sunshine which is her favorite song you want my sunshine

1:23:07

and and um the whole

1:23:13

church the whole funeral home they all said that our father prayer and my pastor asked if anybody wants to know

1:23:20

christ and i want to accept christ 12 people raised their hand and accepted christ

1:23:27

because of daddy and love she's somebody who loves and you know we had people get up there speak about her and if anything

1:23:33

about daniel then he was never angry she was just she would forgive you and she would just love you no matter what

1:23:40

so daniel love brought love to so many people and her love brochure with christ on earth

1:23:52

she was literally the walking example of how all of us should live

1:23:59

she would have gone back to the hospital and talked to every one of those doctors who were harming her and hugged them and

1:24:05

kissed them that is who daniel was yeah she would have never held anything

1:24:10

against them no sorry it's just it's just i wish i'd met her

1:24:17

yep um okay uh

1:24:23

and uh three days four days is it's impossible to

1:24:29

go through all the memories and and pictures and plan an event uh

1:24:35

okay so this was on october 10th 10th 2021.

1:24:41

your birthday was the 9th yes okay now

1:24:47

uh i even told the doctor i said she's coming home for my birthday she's coming home for my birthday

1:24:53

i didn't now

1:24:58

what would you like to share now about

1:25:04

the fight for danielle that starts after this yeah i want to fight justice for

1:25:10

danielle and i'm planning on making a a rare window

1:25:16

for my car where the hospital protocol killed and murdered her for the 20 bonus i want to

1:25:22

name the hospital i want to put flyers all over the hospital all around the neighborhood

1:25:28

because everybody in the neighborhood knows danielle she was such a well-known child she was so well known

1:25:34

and um we we did the autopsy we got the results

1:25:39

which showed that her lungs was gone two weeks before so they knew her lungs was gone and they still did the tracheotomy

1:25:45

surgery uh may i ask what the what does the lungs go on mean does that mean that there was a scarring

1:25:52

no it was rubble it was like rubbery that's what the uh the coroner said the coroner said it was like rubble

1:25:58

yeah it's not usable can't function unfunctionally not functional because of infection and uh

1:26:04

fluid or i'm not hardened no overuse of the event that's what he said overuse of the vet

1:26:11

so she was they were putting the vent up sometime to 80 100

1:26:18

100 yes yes i had her on that for a while yeah about 100 yeah i thought it

1:26:26

yeah yeah he said to me we couldn't do the tracheotomy surgery till she's down like

1:26:31

50 on the vent so

1:26:37

she was on a hundred percent several times before the tracheotomy surgery and after

1:26:42

the tracheotomy surgery so the coroner pretty much said that the vet overused it event and we do have a toxicology

1:26:49

report which i can't even look at

1:26:55

um during the time that she was on the vent or that you or were you unaware at the

1:27:02

time that there was uh correlations known of of excessive vent time and

1:27:08

pressure being correlated with uh i didn't know okay so you didn't ask

1:27:15

most people would not i wouldn't have known you just think it's breathing and i'm

1:27:22

thinking it's um it's damaging the lungs when was the last time you spoke to

1:27:27

daniel the night that i left

1:27:34

the night before that i left she would only raise my hand mommy mommy

1:27:41

mommy come mommy mommy come mommy i want to go home mommy sit next to me don't sit over there mommy sit

1:27:48

next to me i fed her

1:27:55

you know they gave her stuff to help her to sleep

1:28:00

because i asked them could you give her something to calm her down to let her sleep she's
anxious

1:28:06

and that's how i was able to slip out the morning but she kept pulling this off because it

1:28:12

was too much they were too much high flow it's like nosy and loud who could be with that for
anybody it's

1:28:19

uncomfortable so she kept pulling it off and i would get up and i would jump is it daniel look keep
it on please don't

1:28:25

you keep it on keep it on keep it up please daniel please keep it on

1:28:33

my daughter should not have gone that way

1:28:38

no when i think about her not being with me and what she went through that's the worst feeling
in the world to think

1:28:45

what she was feeling that i abandoned her i've left in a strange place with

1:28:51

strangers and anybody knows danielle they love that yet

1:28:59

so my pursuit now was to expose what they did

1:29:04

and hopefully that people would save somebody else's life by hearing my story

1:29:12

and fight for justice however that comes ah it's it's just a shock that they're

1:29:18

still doing the death protocol they're still giving rem disappear when you walk

1:29:24

in they're still venting to this day june 23rd 2022

1:29:30

is still doing the same thing and people are just unaware so we we have to bring

1:29:36

in awareness now to the situation to to rectify this to

1:29:42

change the system and to hold these up people accountable if they wanted that twenty percent
bonus

1:29:49

money that the hospital was getting to give rem the severe i would have paid it so you didn't
have to give my daughter

1:29:54

that and kill her i was never even given a choice you know i never given a choice they just they

1:30:01

just did what they have to do and take my child away know

1:30:07

i've said that before as well so you would have you would have paid the

1:30:12

money i would have paid the money for them to literally keep it in the box

1:30:18

and not do anything yep yeah which begs questions of

1:30:24

is there more going on here than than just the financial reimbursement

1:30:30

i i was actually sicker than danielle when i went to get the monoclonal antibodies why they didn't keep me

1:30:37

because i had cigna ppo i didn't have medicaid hmm that's a good thing

1:30:43

so i mean you think having your own private

1:30:48

insurance versus the insurance that she was on might have had an impact

1:30:53

dania also had sitting at ppo they built both companies they built and they built medicaid i think cigna

1:31:00

didn't pay i think cigna denied it yeah because they already billed medicaid well medicare you can't double

1:31:06

bill yeah the cygnus sent us a bill a bill i guess it probably billed the public that paid

1:31:12

but cygnus sent us an overall statement they were requesting over 500 000

1:31:17

yeah the medical records um the medical billing i would advise everybody to go and get the um the medical billing what did they

1:31:24

build for and the totals because you're allowed you're allowed to get that and that was about half a million

1:31:29

dollars that they built out for danielle yeah

1:31:35

plus plus medicaid i don't know what medicaid paid but cigna we got the bill from cigna um

1:31:40

well no no actually no eob eob eob explanation benefits saying this is a

1:31:46

bill from the hospital and they didn't pay it so so like i said if kovid really killed

1:31:53

everybody i should have been dead because i was with her exposed to her for

1:31:59

she got sick on the 19th 27th i didn't leave the hospital till

1:32:05

september probably first i'm not sure

1:32:10

um so i should have been dead i should have been dead of covet kills and

1:32:18

you similar to myself being middle-aged we are uh at higher

1:32:24

risk uh according to the statistics anyways

1:32:31

and 28 is exceptionally young for someone who's never been in the hospital

1:32:36

never been in a hospital never have any kind of medical problems that's small she's slim she's a tiny

1:32:44

girl um healthy she runs on the treadmill every day she walks

1:32:49

she plays her sports she's very active she eats vegetables chicken um

1:32:55

hardly salad salad for breakfast salads and boil eggs the girls would

1:33:00

make for her chickpeas you know she's very she eat very well strong immune system

1:33:07

low weight 28 uh exceptional diet

1:33:13

active treadmill [Music] strong heart at least and at least 20 different

1:33:20

vitamins every day she gets like 20 different vitamins every day

1:33:25

i mean you have a packet of vitamins morning noon and night each one of those boxes have like five or six each every

1:33:32

type of vitamin daniel got i spent thousands of dollars on vitamins uh she was she was that's why she lasted so

1:33:39

long i did not again i'm i'm i'm stunned so if if covet is in the death certificate

1:33:45

as a primary or or one of them anyone that's sitting there anywhere

1:33:51

yeah they can't do an autopsy no they examined it the county examiner will not

1:33:56

be able to do it is this the a county is a new york state or is this nassau county nassau county that's the

1:34:03

county yeah we live in nassau county have you heard of other counties have similar

1:34:08

in your uh discussions yes we heard now once there's covert there's no autopsy you have to it has to

1:34:14

be done privately and this is why people didn't even think to do an autopsy

1:34:19

because there was no investigation so on her death certificate have multiple organ failure

1:34:25

sepsis yes septic shock i think they're saying multiple organs

1:34:32

after 40 days she still had called it after 40 days she still had colbert i don't think so well that's what this

1:34:38

is yeah i know i'm saying which would mean uh

1:34:44

make them not liable well i really appreciate you sharing

1:34:50

your story is there any any final things you'd like to like to share

1:34:55

um this has been a very powerful testimonial

1:35:00

and it's i i feel obligated i will do everything i can to ensure

1:35:06

danielle's story is properly effectively captured so as many people can

1:35:12

discover her and her life and what she and you have gone through to help others

1:35:18

thank you yeah and we would just like you know people in new york to get together with us and come up with a

1:35:25

a strategy a game plan to um do exactly expose it and do it do whatever we have

1:35:30

well we'll do what we have to do to expose it yeah save lives and they need accountability in new york

1:35:38

uh one last question uh are there any prayers you'd like me to

1:35:43

read tonight psalm 91 thank you

1:35:49

thank you mark for doing all that you do we appreciate you doing all this we appreciate it

1:36:19

you
